* **THIS PLAN IS NOT A ZONING MAP !** Within each map category on this plan map, numerous land uses, zoning districts and housing types may occur. This plan map may be interpreted only as provided in the adopted plan text entitled "Interpretation of The Land Use Plan Map: Adopted Policy Of The Land Use Element." That adopted text provides necessary definitions and standards for allowable land uses, densities or intensities of use for each map category, and for interpretation and application of the plan as a whole. The adopted text must be consulted in its entirety in interpreting any one plan map category, and no provision shall be used in isolation from the remainder. Restrictions accepted by the Board of County Commissioners in association with Land Use Plan map amendments shall be considered as an adopted part of the Comprehensive Development Master Plan (CDMP) and are delineated in the adopted text.

This Land Use Plan (LUP) map, in conjunction with all other adopted components of the CDMP, will govern all development-related actions taken or authorized by Miami-Dade County. The LUP map generally reflects municipal land use policies adopted in comprehensive plans. However, with limited exceptions enumerated in the Statement of Legislative Intent, this plan does not supersede local land use authority of incorporated municipal governments authorized in accordance with the Miami-Dade County Charter. For further guidance on future land uses authorized within incorporated municipalities, consult the local comprehensive plan adopted by the pertinent municipality.

NOTICE: The original true and correct copy of the official Land Use Plan map is maintained by the Director of the Department of Regulatory and Economic Resources. This is a reproduction. Any question regarding information shown on this reproduction shall be resolved by reference to the original.

1.0 INTRODUCTION

This Traffic Data & Projections Memorandum (TDPM) is being prepared as part of the Project Development & Environment (PD&E) to address the proposed improvements at the SR 9/I-95 corridor from south of SR 860/Miami Gardens Drive (MP 13.724) to north of Broward County Line (MP 17.199), in Miami-Dade County, Florida. **Exhibit 1** shows the project location. This memorandum documents the traffic data collection and traffic projection development for the PD&E.

Previous studies have identified the need for capacity improvements, which in turn will also improve safety within this segment of SR 9/I-95. The regional roadway system is also close to build-out and the ability to add more traffic lanes is limited. The proposed improvements analyzed in the PD&E stem from the Build Concepts that were developed as part of the *FDOT District 6 SR 9/I-95 Corridor Planning Study* and *FDOT District 4 Interstate 95 Corridor Planning Study*, that assessed enhancements along the length of the SR 9/I-95 corridor within Miami-Dade. As such, this project is part of a larger effort to improve the SR 9/I-95 corridor within Miami-Dade County and regionally within Broward and Palm Beach Counties.

In addition, FDOT District 4 is completing a PD&E study from SR 858/Hallandale Beach Boulevard to SR 820/Hollywood Boulevard (FM 436903-1-22-02) with the focus to improve interchange and ramp terminals intersection capacity at Hallandale Beach Boulevard, Pembroke Road, and Hollywood Boulevard. North of this PD&E study limits, FDOT District 4 is programmed to conduct a PD&E study for SR 9/I-95 from Miami-Dade/Broward County Line to north of Griffin Road, including interchange improvements at Sheridan Street, Stirling Road, and Griffin Road (FM 439170-1-22-01).

This report describes the methodology and presents the results of the data collection and traffic projection efforts, which have been closely coordinated with FDOT District 4 projects' to the north. Relevant information has been extracted and included from *FDOT District 4 Traffic Data Collection & Traffic Projections Report*, for ease of reference. The following tasks have been performed under this study:

1.1 Traffic Data Collection Methodology

Existing traffic data was provided by the Department and supplemented with available information from different sources. **Exhibit 2** shows the study limits. The following information was gathered within the study area:

- SR 9/I-95 Mainline 72-hour bi-directional vehicle volumes in 15-minute intervals;
- Arterial/Ramp 72-hour bi-directional vehicle volumes and classification in 15-minute intervals;
- Turning Movement Counts (TMC) in 15-minute intervals (3-hour in the AM and 3-hour in the PM); and
- Traffic Signal Information.

Exhibit 1: Project Location Map

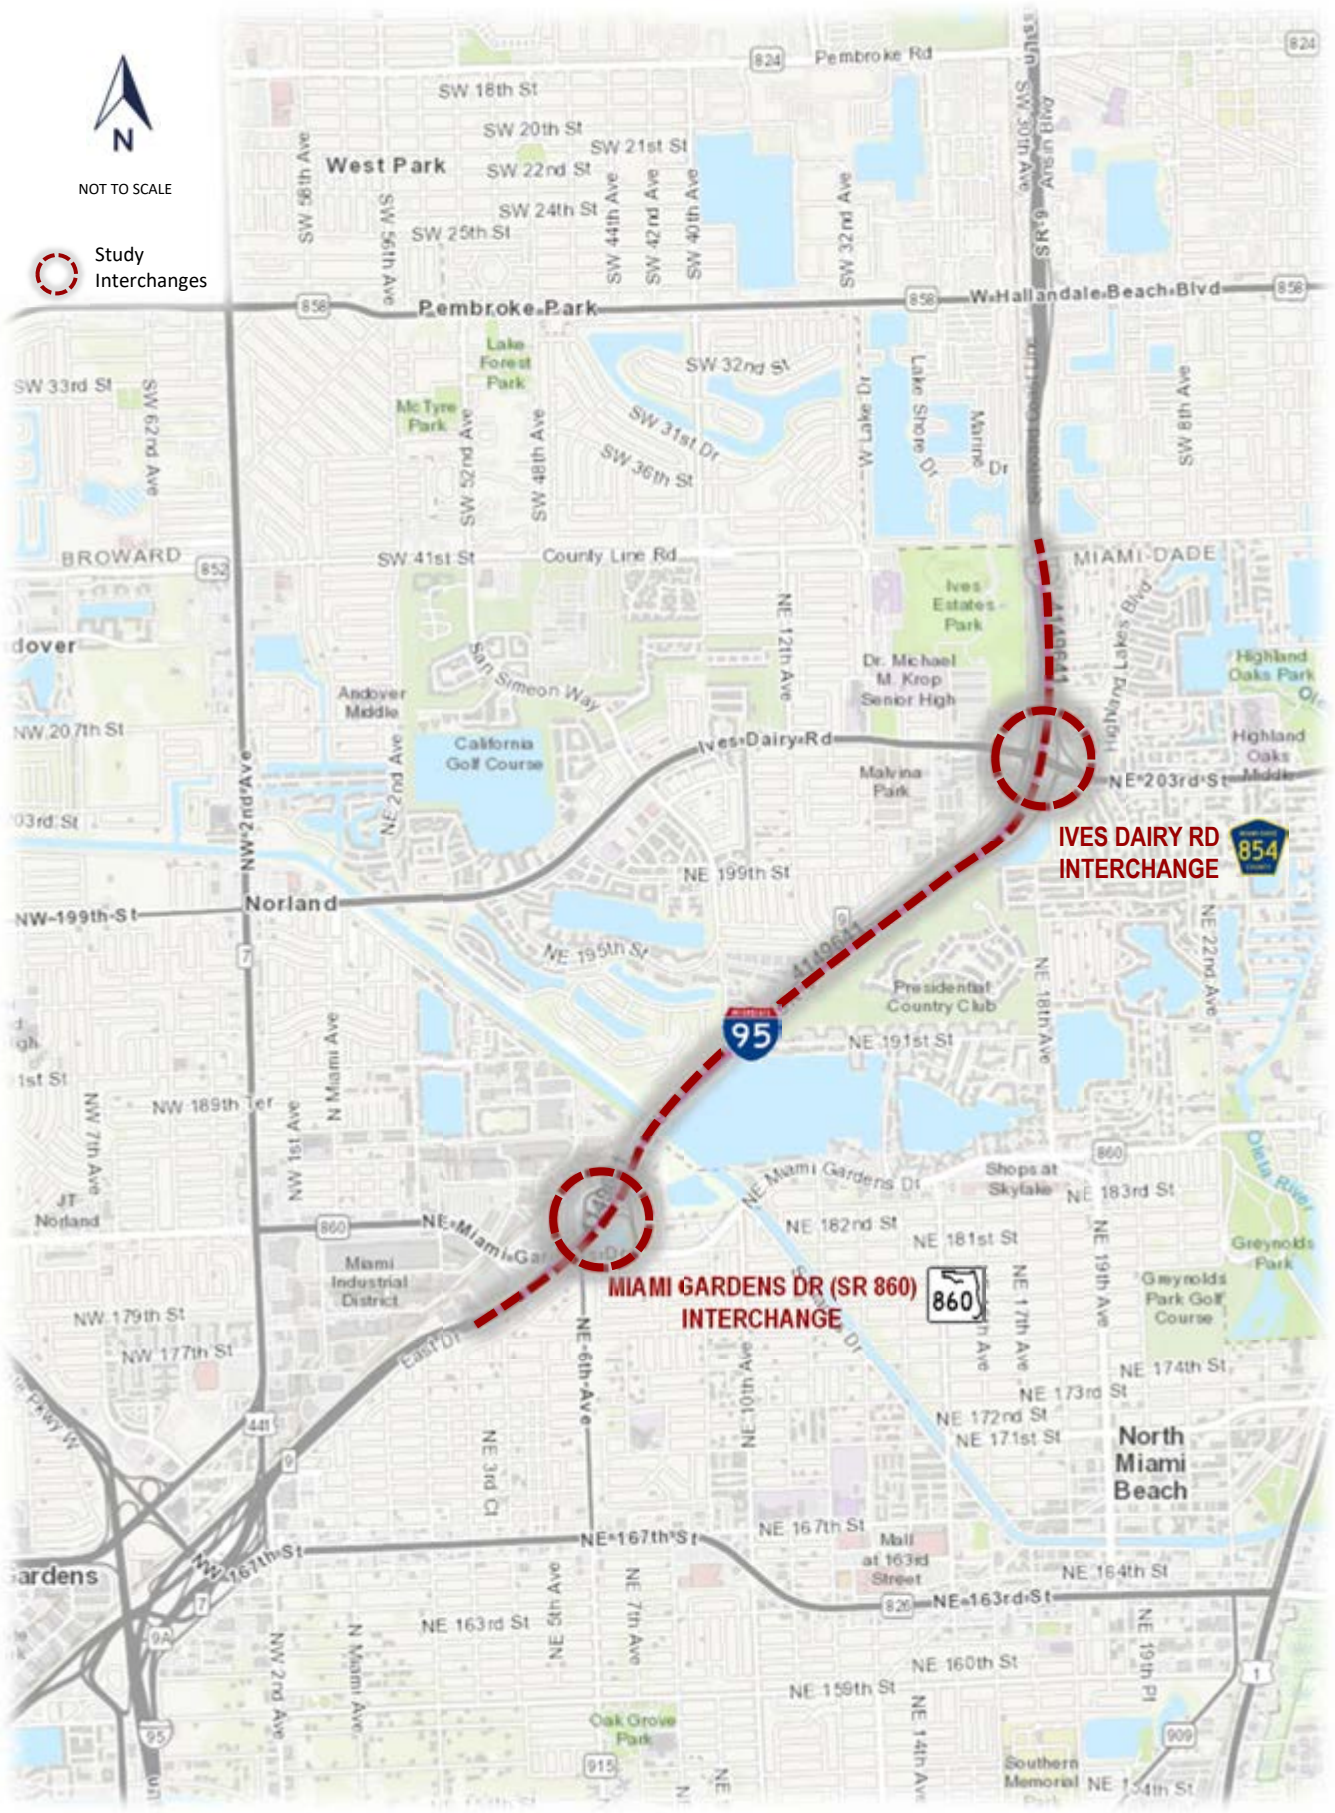

Exhibit 2: Study Limits

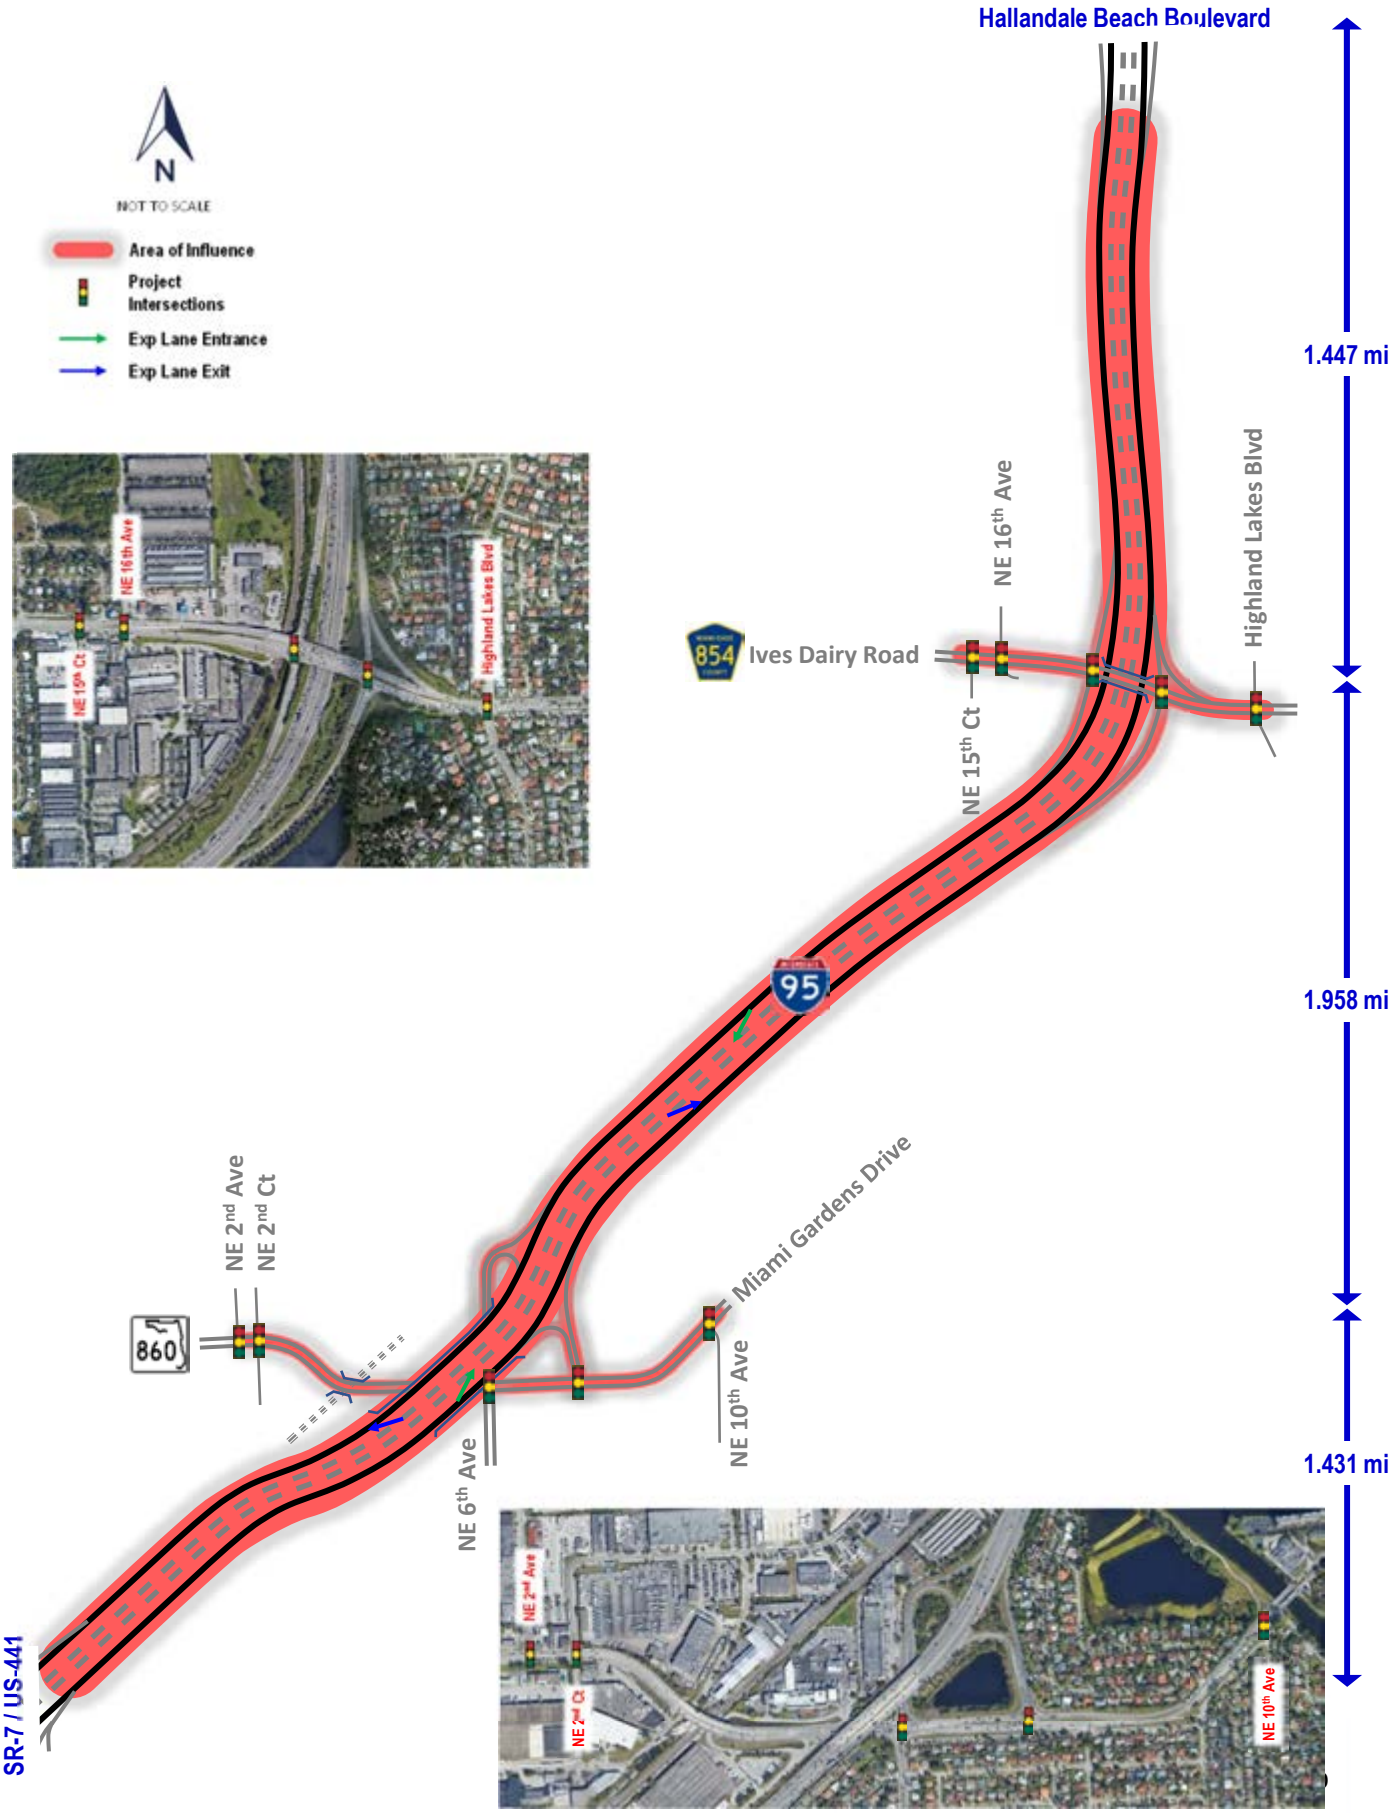

1.2 Traffic Projections Methodology

As part of this study, traffic projections were prepared for Opening Year 2030 and Design Year 2050 under the No-Build and Build Alternative conditions. Based on the coordination with the Department, the No-Build conditions are defined as transportation network with the inclusion of Cost Feasible Plan improvements in the adopted MPO 2045 Long Range Transportation Plan (LRTP), which include improvements to the Golden Glades Interchange (GGI) to the south of the study area. In addition, preferred alternative from the *SR 9/I-95 PD&E study from Hallandale Beach Boulevard to Hollywood Boulevard* are included as part of the No-Build conditions. Subtasks under this task include the following:

- **Data Gathering for Project Traffic from Past Studies:** The traffic projections and forecasts developed for the SR 9/I-95 PD&E Study from Hallandale Beach Boulevard to Hollywood Boulevard PD&E, the SR 9/I-95 Corridor Planning Study led by FDOT District 6, and the SR 9/I-95 PD&E study from Miami/Broward County Line to North of Griffin Road led by District 4, in proximity to the study limits were referenced in projecting traffic for the SR 9/I-95 project from south of Miami Gardens Drive to north of Broward County line. Coordination has been carried out with the SR 9/I-95 Express Team, SR 9/I-95 PD&E Team from Hallandale Beach Boulevard to Hollywood Boulevard, and District 4's SR 9/I-95 PD&E Team north of the county line to ensure traffic projections and improvements from various sources are considered.
- **Subarea Model Forecast for No-Build Conditions:** A future year (2045) no-build network in Southeast Florida Regional Planning Model (SERPM) was developed based on the 2045 Cost Feasible Plans adopted by the three MPOs in the region. The socioeconomic data, network coding, and other model settings were reviewed to make them consistent with subsequent changes. The no-build network also includes the proposed improvements from the aforementioned projects in coordination with the Department.
- **Traffic Projections:** Traffic projections for Design Year 2050 were developed for both the AM and PM peak hour periods. The Southeast Florida Regional Planning Model (SERPM), Version 8.513 has been used for this project. Horizon year 2045 No-Build scenario was modeled. Build Alternatives 1, 2, and 3 were developed by reassigning the 2050 No-Build volumes to each of the Build Alternatives based on the origin-destination and modified roadway network information. For Design Year 2050, traffic volumes were extrapolated from future year 2045. For opening year 2030, traffic volumes were interpolated between Existing Year 2021 and Design Year 2050.

  The model results were post-processed. Existing Year 2021 model AADTs were developed by interpolating SERPM 2015 and 2045 model volumes and compared to actual existing year 2021 traffic counts. Future year link volumes were adjusted using two factors: the ratio of the actual existing year 2021 traffic counts to the interpolated year 2021 model volumes and the numerical difference between the actual existing year 2021 traffic counts and the interpolated year 2021 model volumes. Where appropriate, forecasted model volumes were used. The resulting growth rates of the SERPM forecasted volumes were compared against growth trends of historical counts and model socio-economic/land use data. Any outlier links were postprocessed.

The ratio and difference adjustments were checked against a minimum growth rate of 0.5% per year for reasonableness. DDHVs were developed using the FDOT D4 TMTool based on methodologies presented in the FDOT Project Traffic Forecasting Handbook. The volumes were balanced and smoothed as needed. Coordination was carried out to ensure the AADT projections at the county line along SR 9/I-95 are consistent with the AADT forecasted by the SR 9/I-95 PD&E Team north of the county line.

2.0 TRAFFIC DATA COLLECTION

This section documents the traffic data collection efforts conducted as part of this PD&E. Existing traffic data was provided by the Department and supplemented with available information from different sources. **Attachment A** presents all traffic data collected in this study.

2.1 SR 9/I-95 Traffic Counts

SR 9/I-95 Mainline 72-hour bi-directional vehicle volumes in 15-minute intervals were obtained from RITIS from Tuesday, September 21, 2021 to Thursday, September 23, 2021. SR 9/I-95 were supplemented with counts from regular FDOT count stations from the Florida Traffic Online (FTO) database. **Exhibit 3** presents traffic data count locations for SR 9/I-95.

2.2 Crossroads Counts

Full intersection counts were provided by the Department and included: 1) Arterial/Ramp 72-hour bi-directional vehicle volumes and classification in 15-minute intervals (from Tuesday, September 21, 2021 to Thursday, September 23, 2021); and 2) Turning movement counts (TMCs) (Thursday, September 23, 2021 from 6:30 a.m. to 9:30 a.m. and from 3:30 p.m. to 6:30 p.m.). Traffic signal timing information was obtained from the Miami-Dade County Traffic Signals and Signs Division (TS&S) and field checks. Data was collected along the two corridors as follows:

Along SR 860/Miami Gardens Drive extends from NE 2nd Avenue to NE 10th Avenue, including the following signalized intersections:

- SR 860/Miami Gardens Drive at NE 2nd Avenue;
- SR 860/Miami Gardens Drive at NE 2nd Court;
- SR 9/I-95 SB Ramp Terminal/NE 6th Avenue (SR 915) at SR 860/Miami Gardens Drive;
- SR 9/I-95 NB Ramp Terminal at SR 860/Miami Gardens Drive; and
- SR 860/Miami Gardens Drive at NE 10th Avenue.

Exhibits 4 presents traffic data count locations for SR 860/Miami Gardens Drive.

Along CR 854/Ives Dairy Road extends from NE 15th Court to Highland Lakes Boulevard, including the following intersections:

- CR 854/Ives Dairy Road at NE 15th Court;
- CR 854/Ives Dairy Road at NE 16th Avenue;
- SR 9/I-95 SB Ramp Terminal at CR 854/Ives Dairy Road;
- SR 9/I-95 NB Ramp Terminal at CR 854/Ives Dairy Road; and
- CR 854/Ives Dairy Road at Highland Lakes Boulevard.

Exhibits 5 presents traffic data count locations for CR 854/Ives Dairy Road.

Exhibit 3: Traffic Data Locations – SR 9/I-95

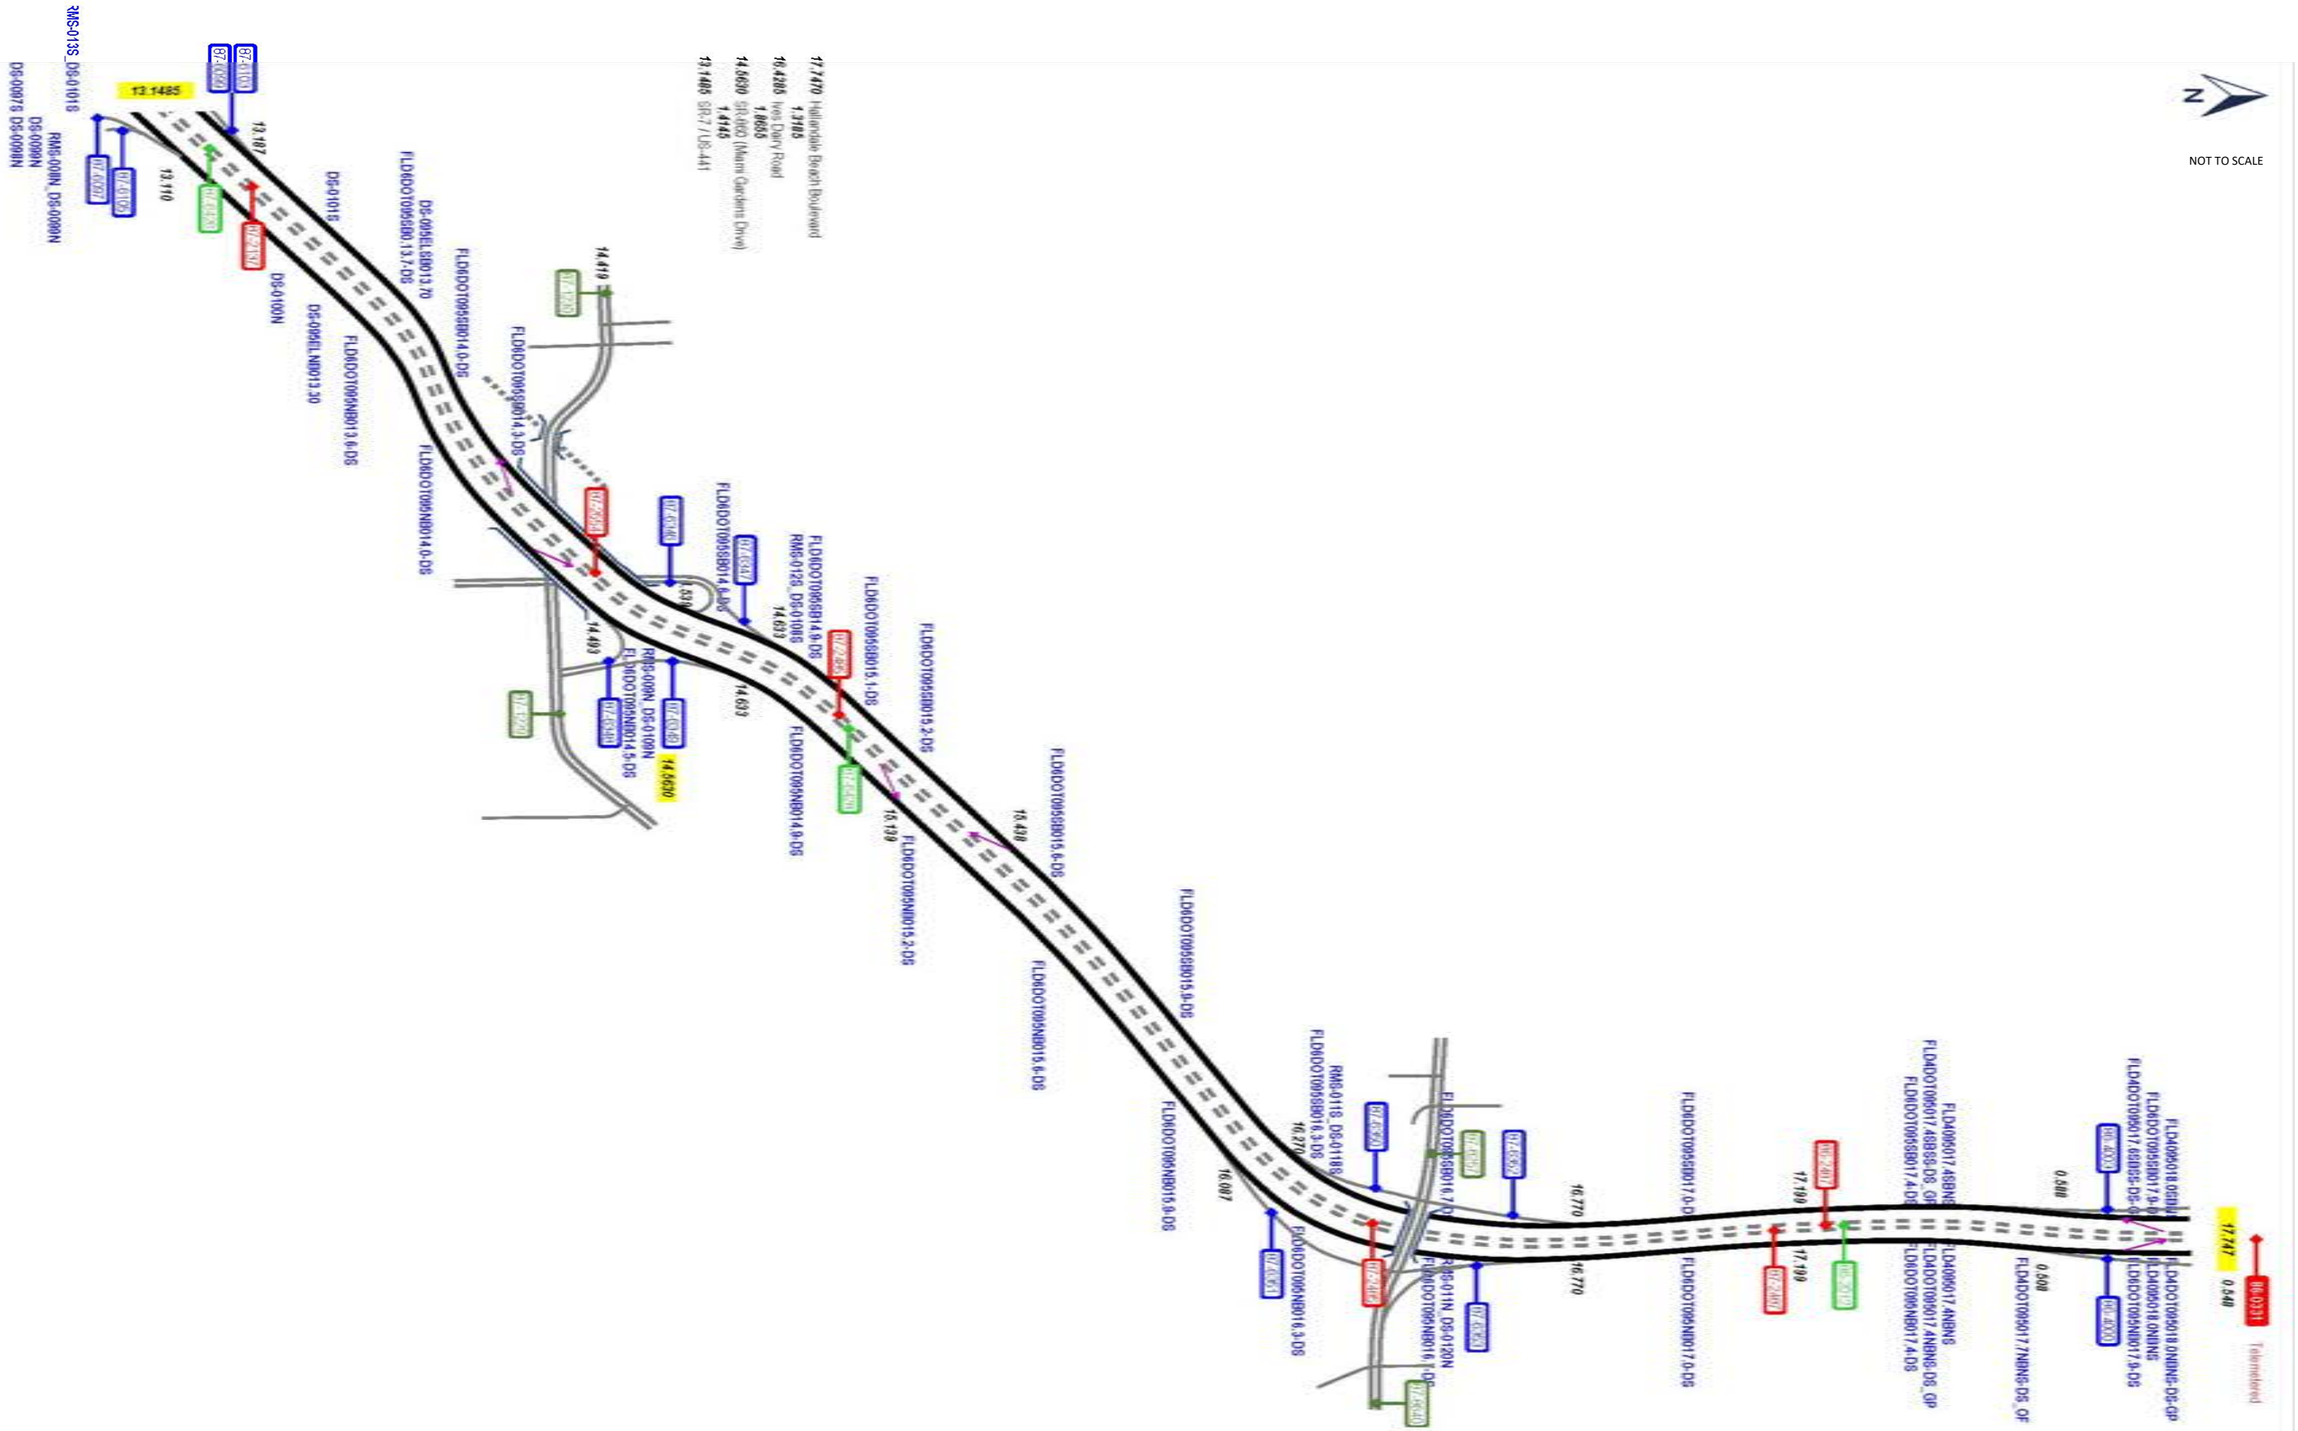

Exhibit 4: Traffic Data Locations – SR 860/Miami Gardens Drive

Exhibit 5: Traffic Data Locations – CR 854/Ives Dairy Road

3.0 TRAFFIC DATA SUMMARY

This section documents the methodology used to develop base year (2021) traffic volumes, including the annual average daily traffic (AADT) volumes, peak hour approach volumes, and peak hour turning movement counts. Existing Year 2021 volume calculations were coordinated with the adjacent projects to the north within FDOT District 4. The three-day average traffic volumes were used. Link volumes and turning movement counts were balanced between intersections within the project limits. **Table 1** presents a summary of existing volumes along SR 9/I-95. **Exhibit 6** presents a summary of existing volumes. Existing Year 2021 volume calculation summaries are provided in **Attachment B**.

Table 1: Existing Year 2021 SR 9/I-95 AADT Volumes

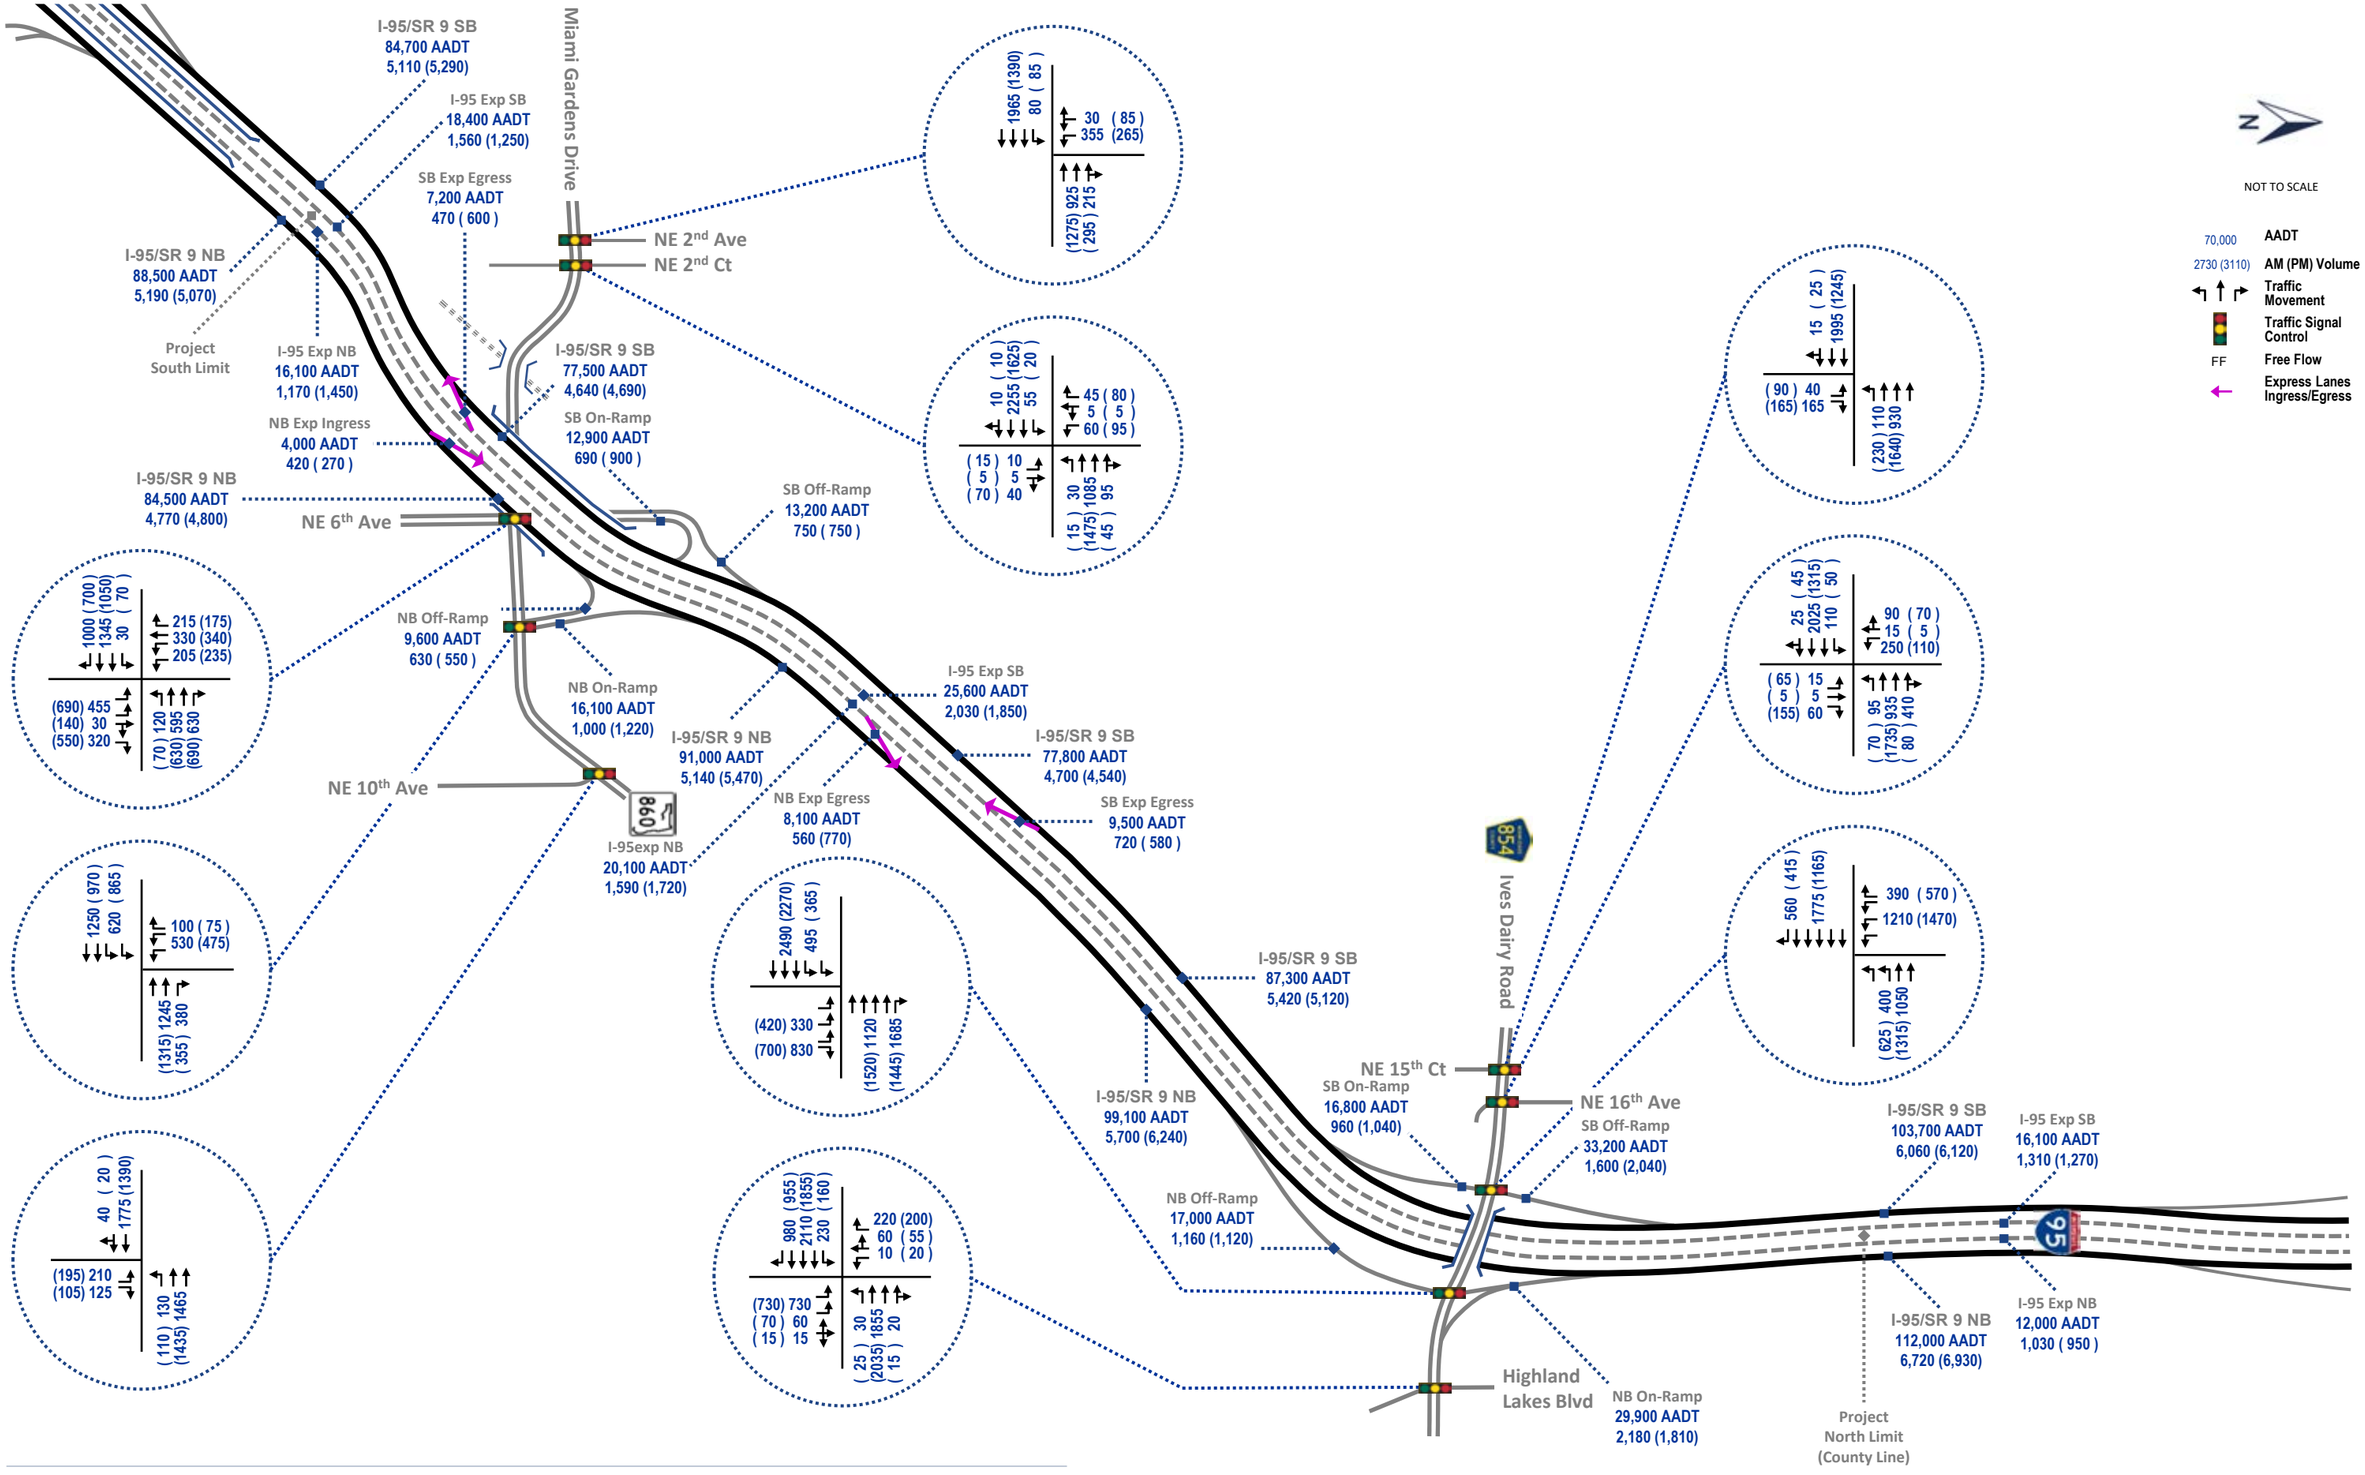
Exhibit 6: Existing Year 2021 Traffic Volumes



For this study, the three-day average traffic volumes were used, together with the applicable axle correction factors and seasonal factors that are published on FDOT Florida Traffic Online (2019), to calculate the 2021 AADTs for each approach of the study intersections. For SR 9/I-95 and classification counts, since the number of vehicles were collected instead of axles, axle correction factors were not applied. The 2021 AADT at SR 9/I-95 north of CR 854/Ives Dairy Road was calculated based on counts at two FDOT sites (#862487 and #861487). Other SR 9/I-95 mainline 2021 AADTs were calculated based on ramp volumes and the 2021 AADT at SR 9/I-95 within the study area. Then, the calculated AADTs were balanced in coordination with the Project Team from FDOT District 4 that is conducting the SR 9/I-95 PD&E Study from Miami-Dade/Broward County line to I-595.

The peak hour volumes for the study corridors were determined based on the observed turning movement counts collected along SR 860/Miami Gardens Drive from NE 2nd Avenue to NE 10th Avenue, and CR 854/Ives Dairy Road from NE 15th Court to Highland Lakes Boulevard. To estimate Existing Year 2021 peak hour volumes, the peak hour counts were rounded up to the nearest 5. Finally, the rounded peak hour turning movement counts were balanced in coordination with the Project Team from FDOT District 4 that is conducting the SR 9/I-95 PD&E Study from Miami-Dade/Broward County line to I-595.

3.1 Vissim Vehicle Input Distribution

A four-hour analysis period was selected for the Vissim analysis to ensure that traffic operations were accurately modeled. The four-hour analysis period provided adequate time for congestion build-up and dissipation. Therefore, the factors shown in **Table 2** were developed using the synopsis report at counter site 87-2487 (SR 9A/I-95, 200' S. Miami-Dade/Broward Co. Line, Northbound) in the range of June 29th (Tuesday) and July 1st (Thursday), 2021 to distribute the peak hour traffic throughout the peak period. This count location has the highest volume within the study area, and the northbound direction has the highest volumes during each morning and afternoon peak periods. A 30-minute seeding period was coded. The second hour represented the peak hour. Traffic volumes were entered in 15-minute increments as exact values.

Table 2: Peak Period Vehicle Input Distributions

Hour	Time Interval	AM Period		Time Interval	PM Period	
		Hourly Proportion[1]	Distribution		Hourly Proportion[1]	Distribution
Seeding	6:30	85.55%	19.38%	2:30	88.13%	21.41%
	6:45		23.40%	2:45		22.66%
Pre Peak (1st)	7:00	92.92%	22.06%	3:00	94.13%	23.00%
	7:15		21.71%	3:15		22.61%
	7:30		23.33%	3:30		23.73%
	7:45		25.82%	3:45		24.79%
Peak (2nd)	8:00	100.00%	25.82%	4:00	100.00%	25.66%
	8:15		24.63%	4:15		25.44%
	8:30		25.29%	4:30		23.84%
	8:45		24.26%	4:45		25.06%
Post Peak (3rd)	9:00	92.99%	24.11%	5:00	96.30%	24.23%
	9:15		23.49%	5:15		24.07%
	9:30		22.69%	5:30		25.08%
	9:45		22.70%	5:45		22.91%
Breaking Hour	10:00	86.09%	20.17%	6:00	98.77%	23.58%
	10:15		21.50%	6:15		25.27%
	10:30		22.43%	6:30		26.24%
	10:45		21.99%	6:45		23.68%

1 Percent of peak hour

4.0 ORIGIN-DESTINATION/TRAFFIC ASSIGNMENT ANALYSIS

An Origin-Destination/Traffic Assignment analysis was conducted to provide an understanding of the travel patterns along the corridor and provide information for traffic analysis when considering one-sided, two-sided and overlapping weaving. The project to the north used StreetLight data to develop an origin-destination matrix table. However, this information covered only up to Ives Dary Road, it did not include express lane locations as destination-origins, and it was only for daily data.

The Base Year 2015 SERPM has HOV lanes and not Express Managed Lanes. Express Lanes were not fully implemented until 2016 based on Google Earth Pro Historical Imagery. Therefore, the accuracy of the Express Lanes usage prediction cannot be properly assessed. In addition, The subarea validation indicates that the accuracy of the SERPM model predictions deteriorates for arterials, which will impact the accuracy of origin-destination matrices from the models.

Therefore, the volume assignment to/from a ramp from/to another ramp was developed from the total volume assigned at each ramp (including express lane ingress and egress ramps) between the Golden Glades Interchange and I-595. **Exhibits 7** and **8** present a summary of the ramp-to-ramp volume calculations for the existing southbound AM and PM peak hours, respectively. The ramp-to-ramp volume calculations for the existing northbound AM and PM peak hours are presented in **Exhibits 9** and **10**, respectively.

Exhibit 7: Existing Year 2021 Traffic Volumes, Southbound, AM Peak Hour, Ramp-to-Ramp Volume Calculations

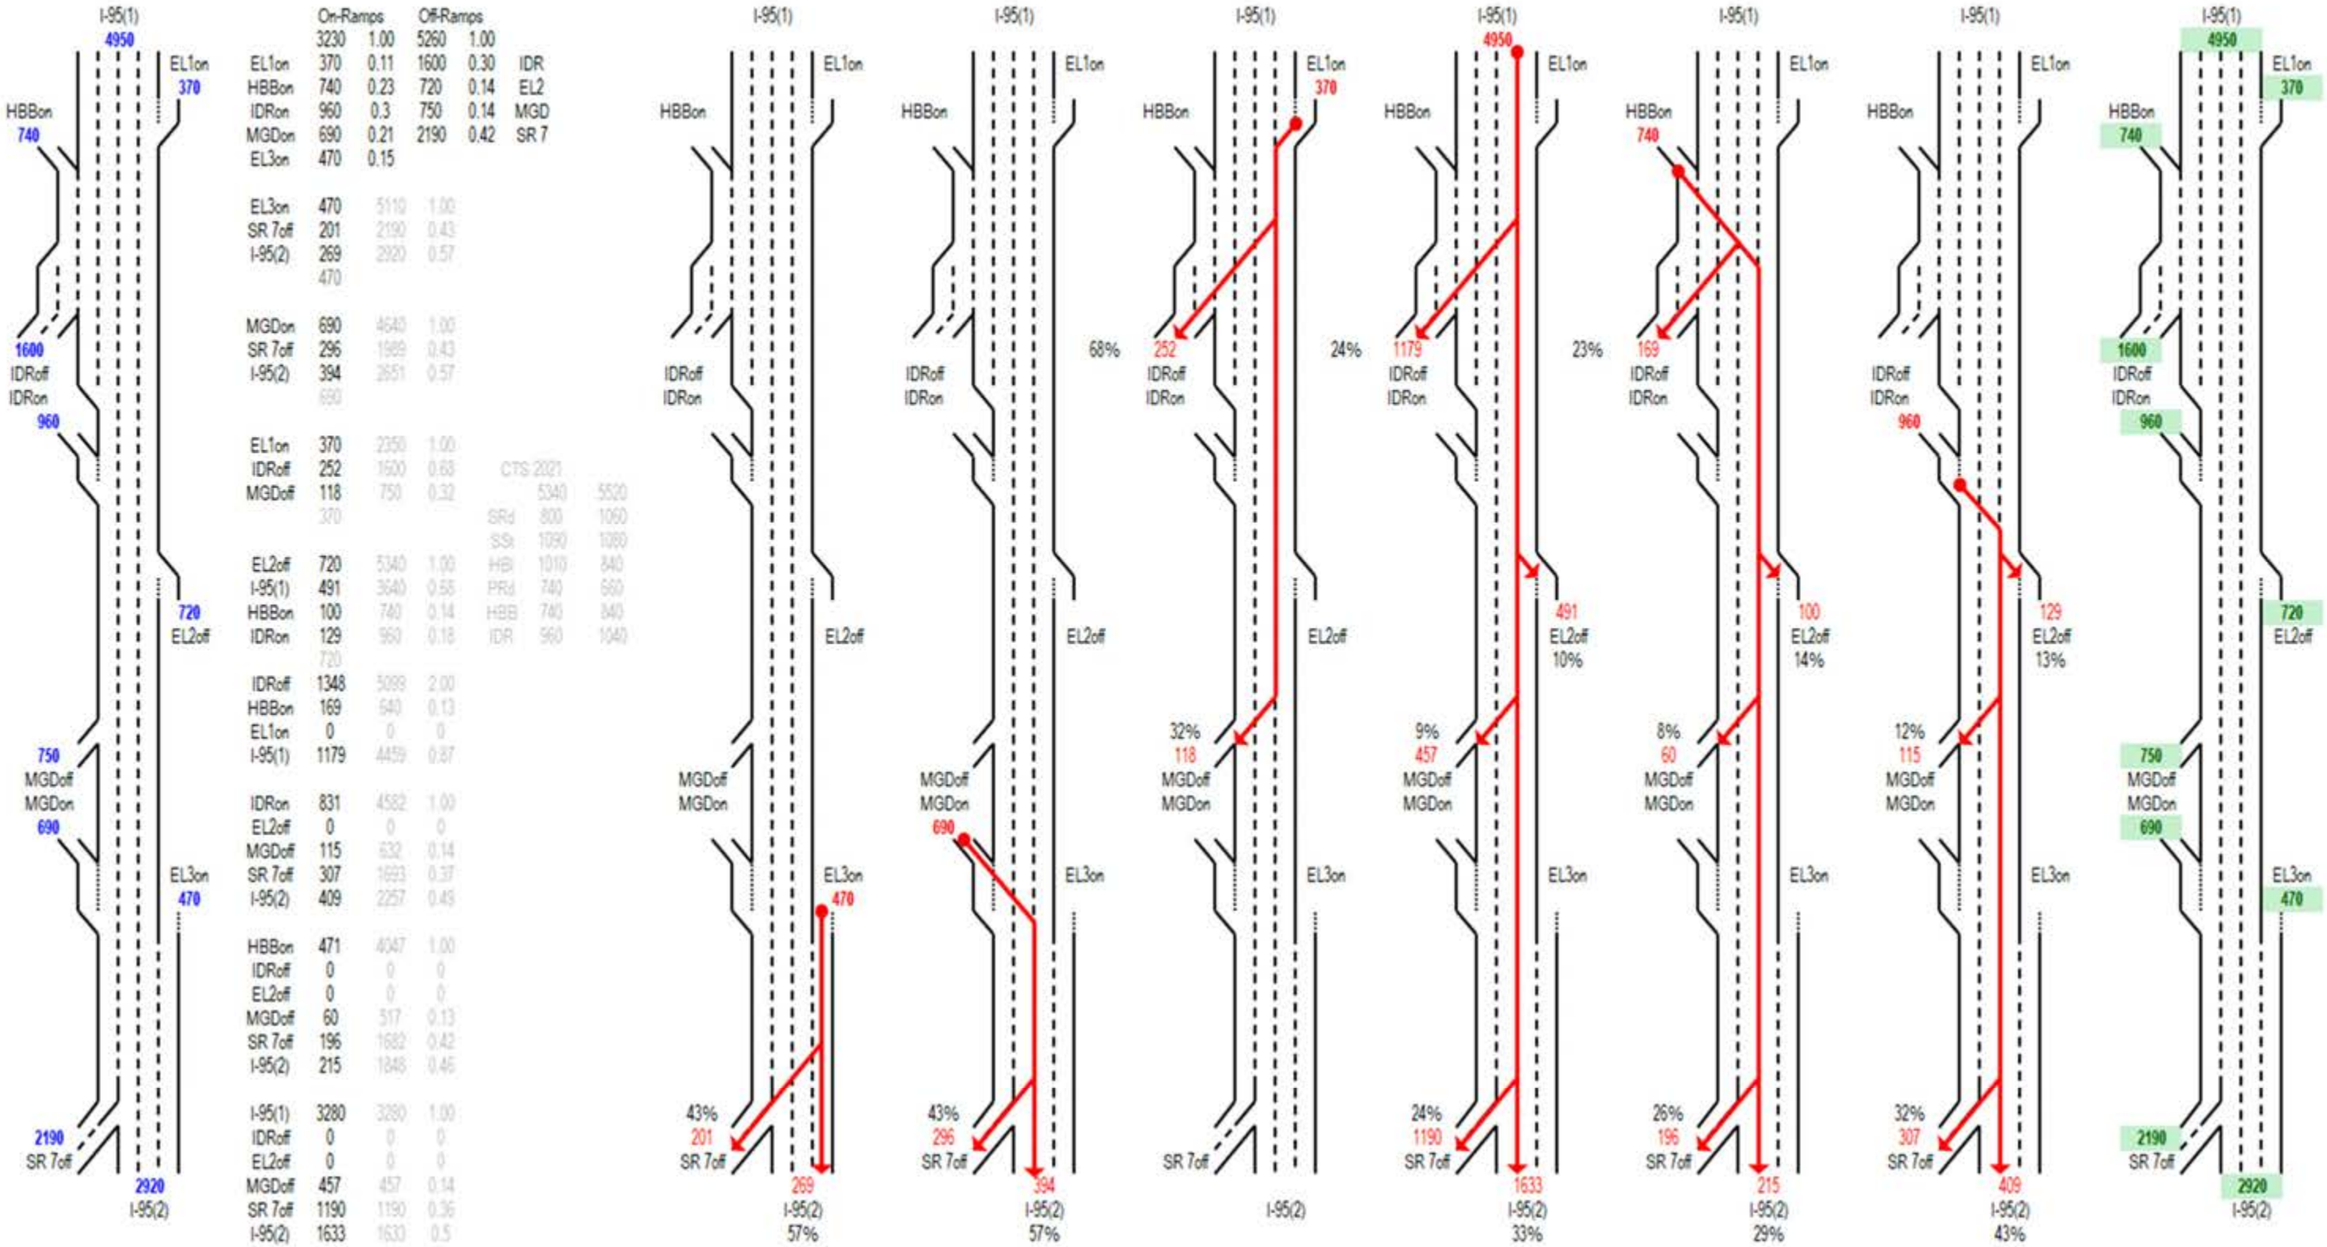


Exhibit 8: Existing Year 2021 Traffic Volumes, Southbound, PM Peak Hour, Ramp-to-Ramp Volume Calculations

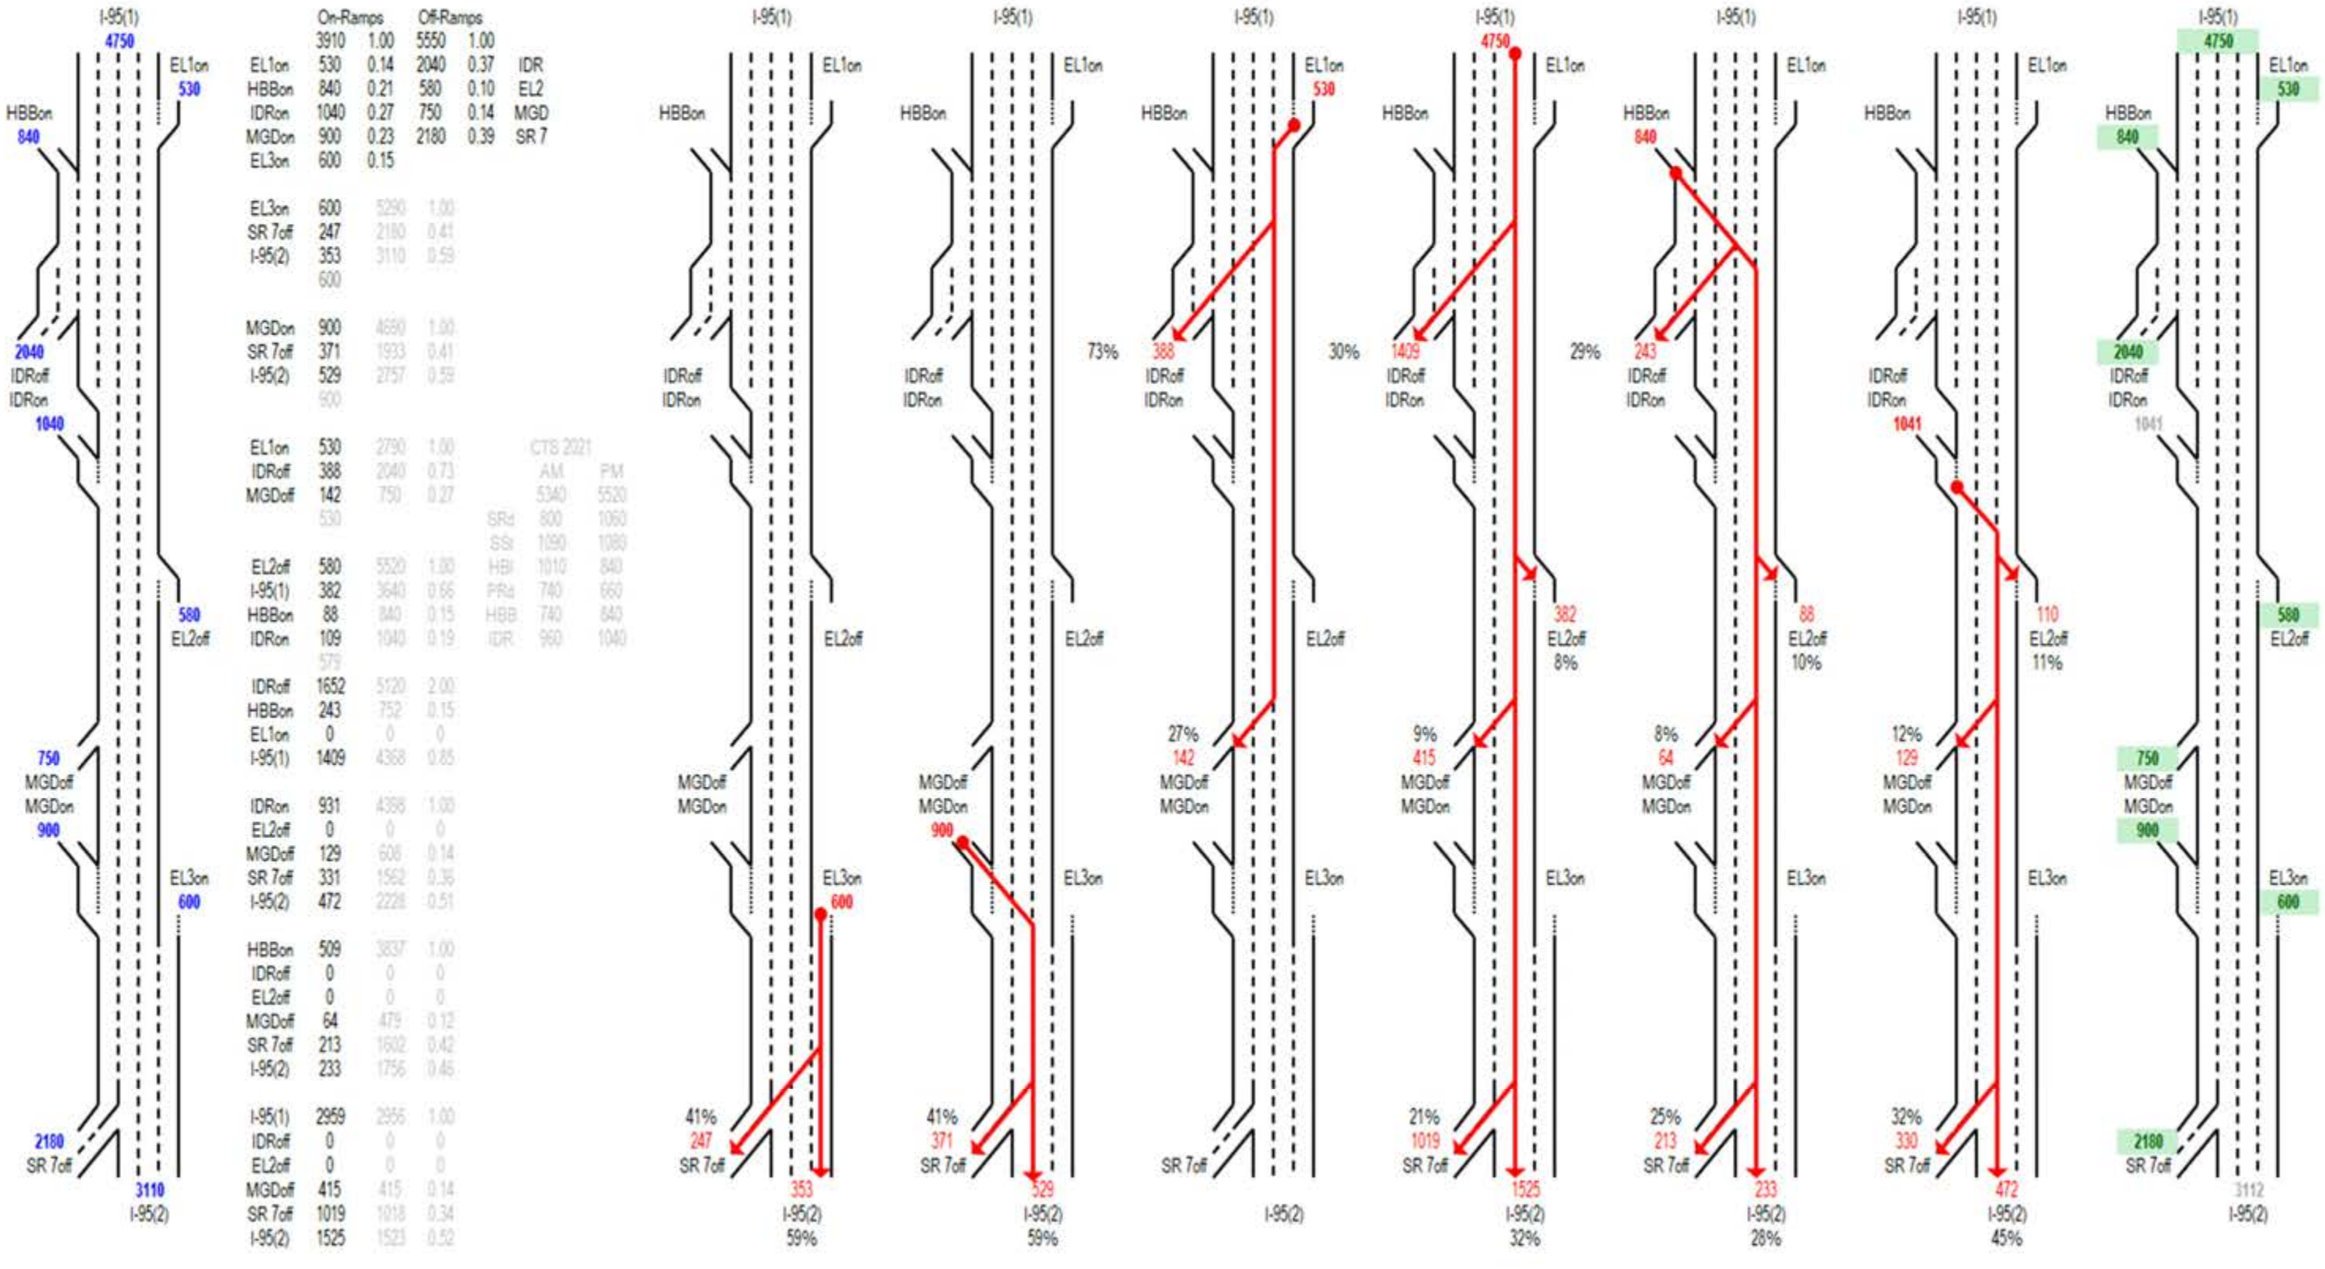

Exhibit 9: Existing Year 2021 Traffic Volumes, Northbound, AM Peak Hour, Ramp-to-Ramp Volume Calculations

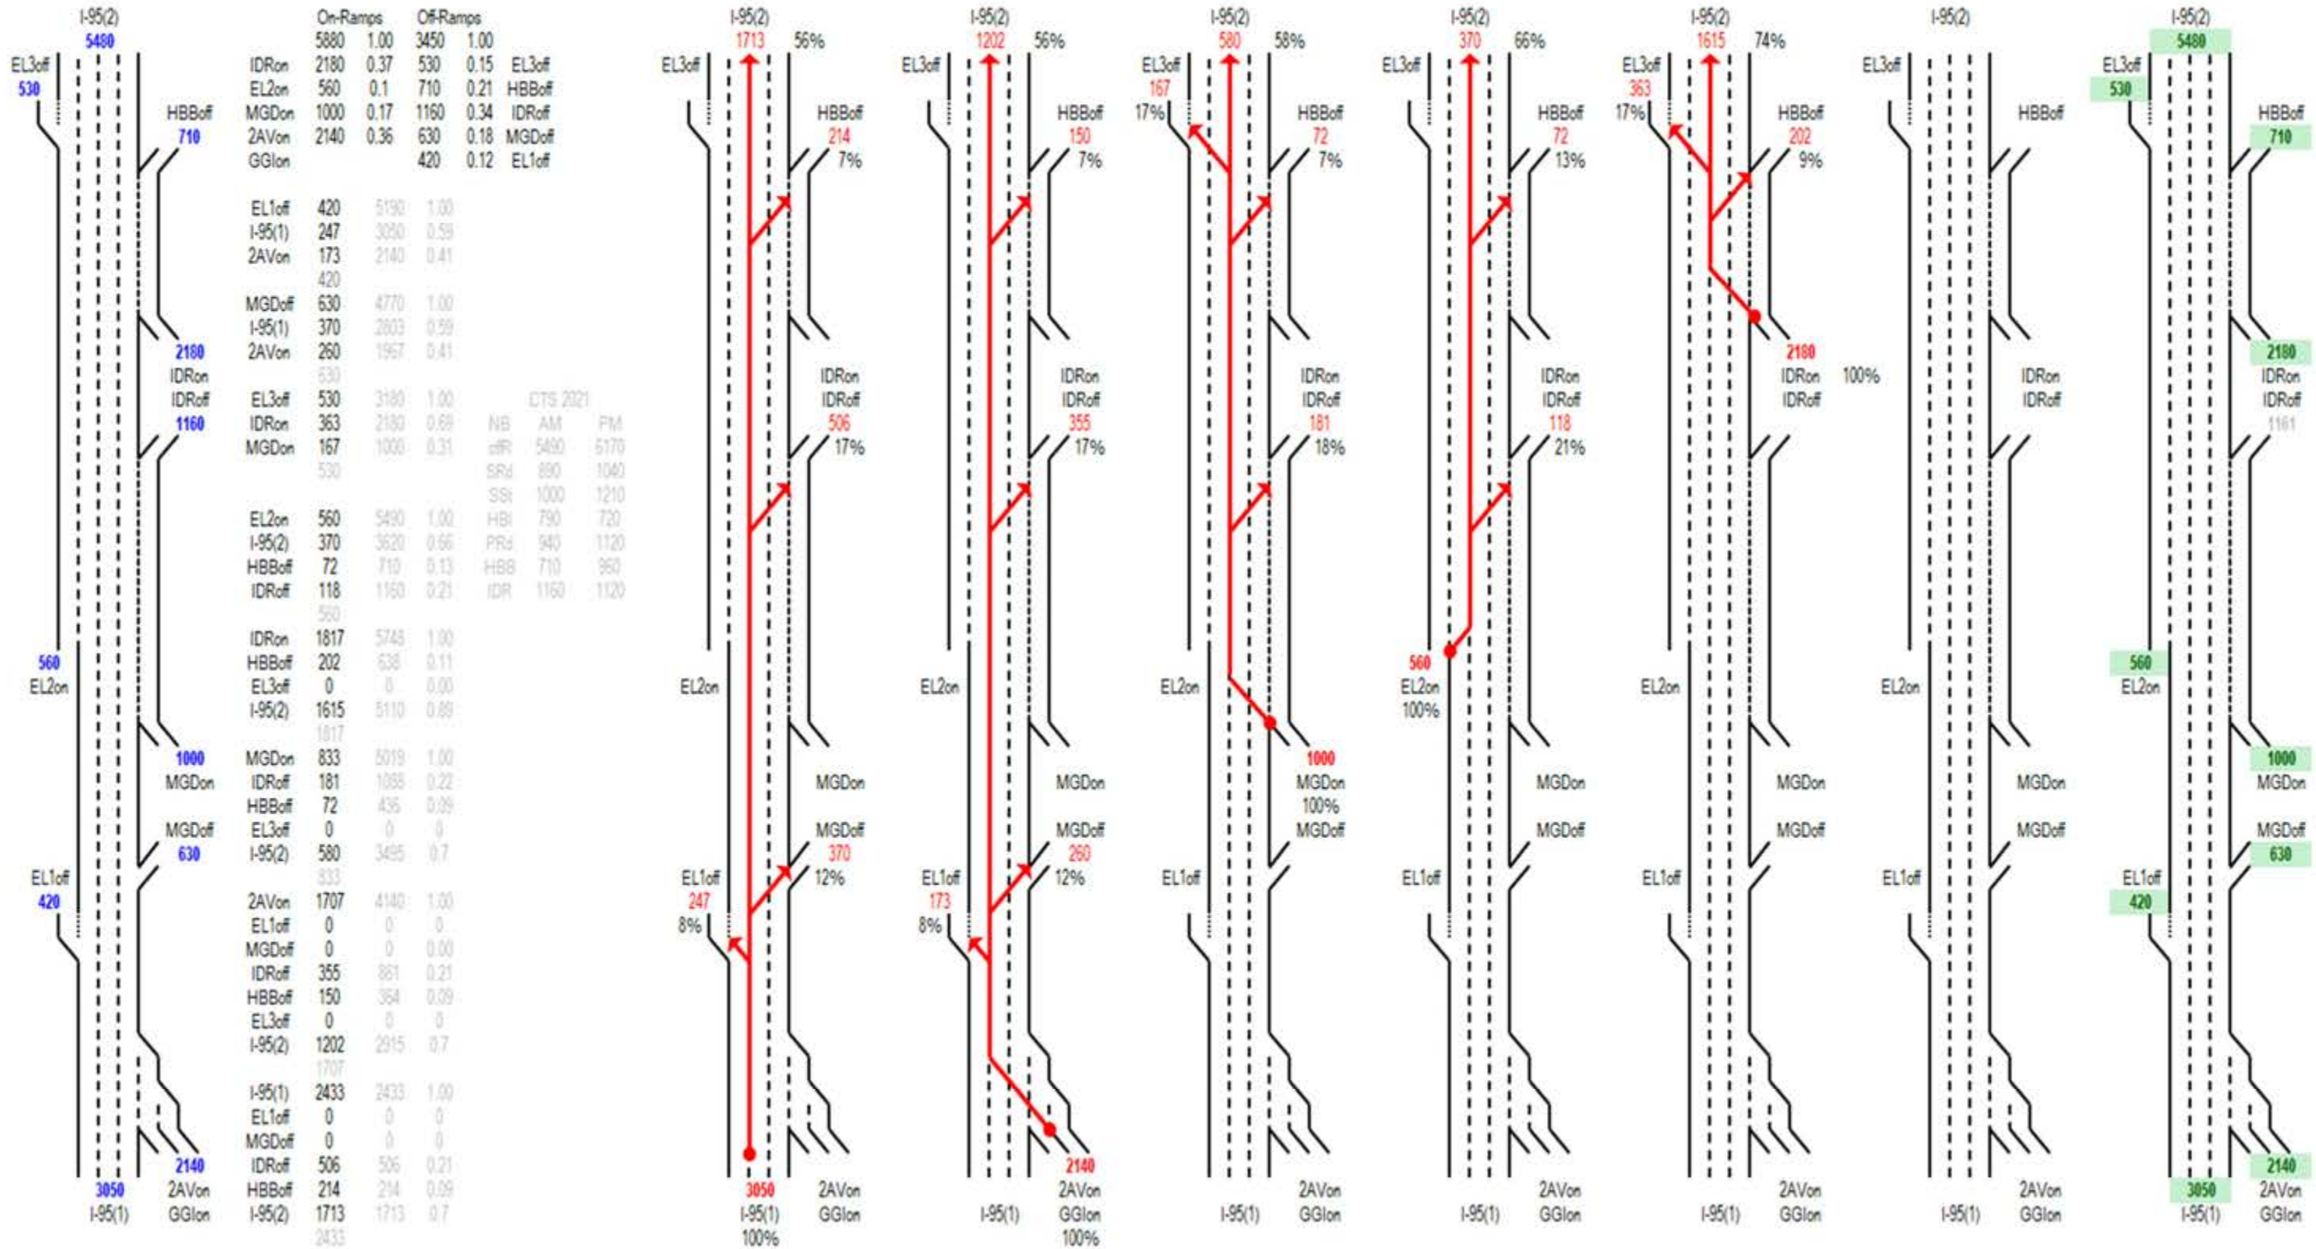

Exhibit 10: Existing Year 2021 Traffic Volumes, Northbound, PM Peak Hour, Ramp-to-Ramp Volume Calculations

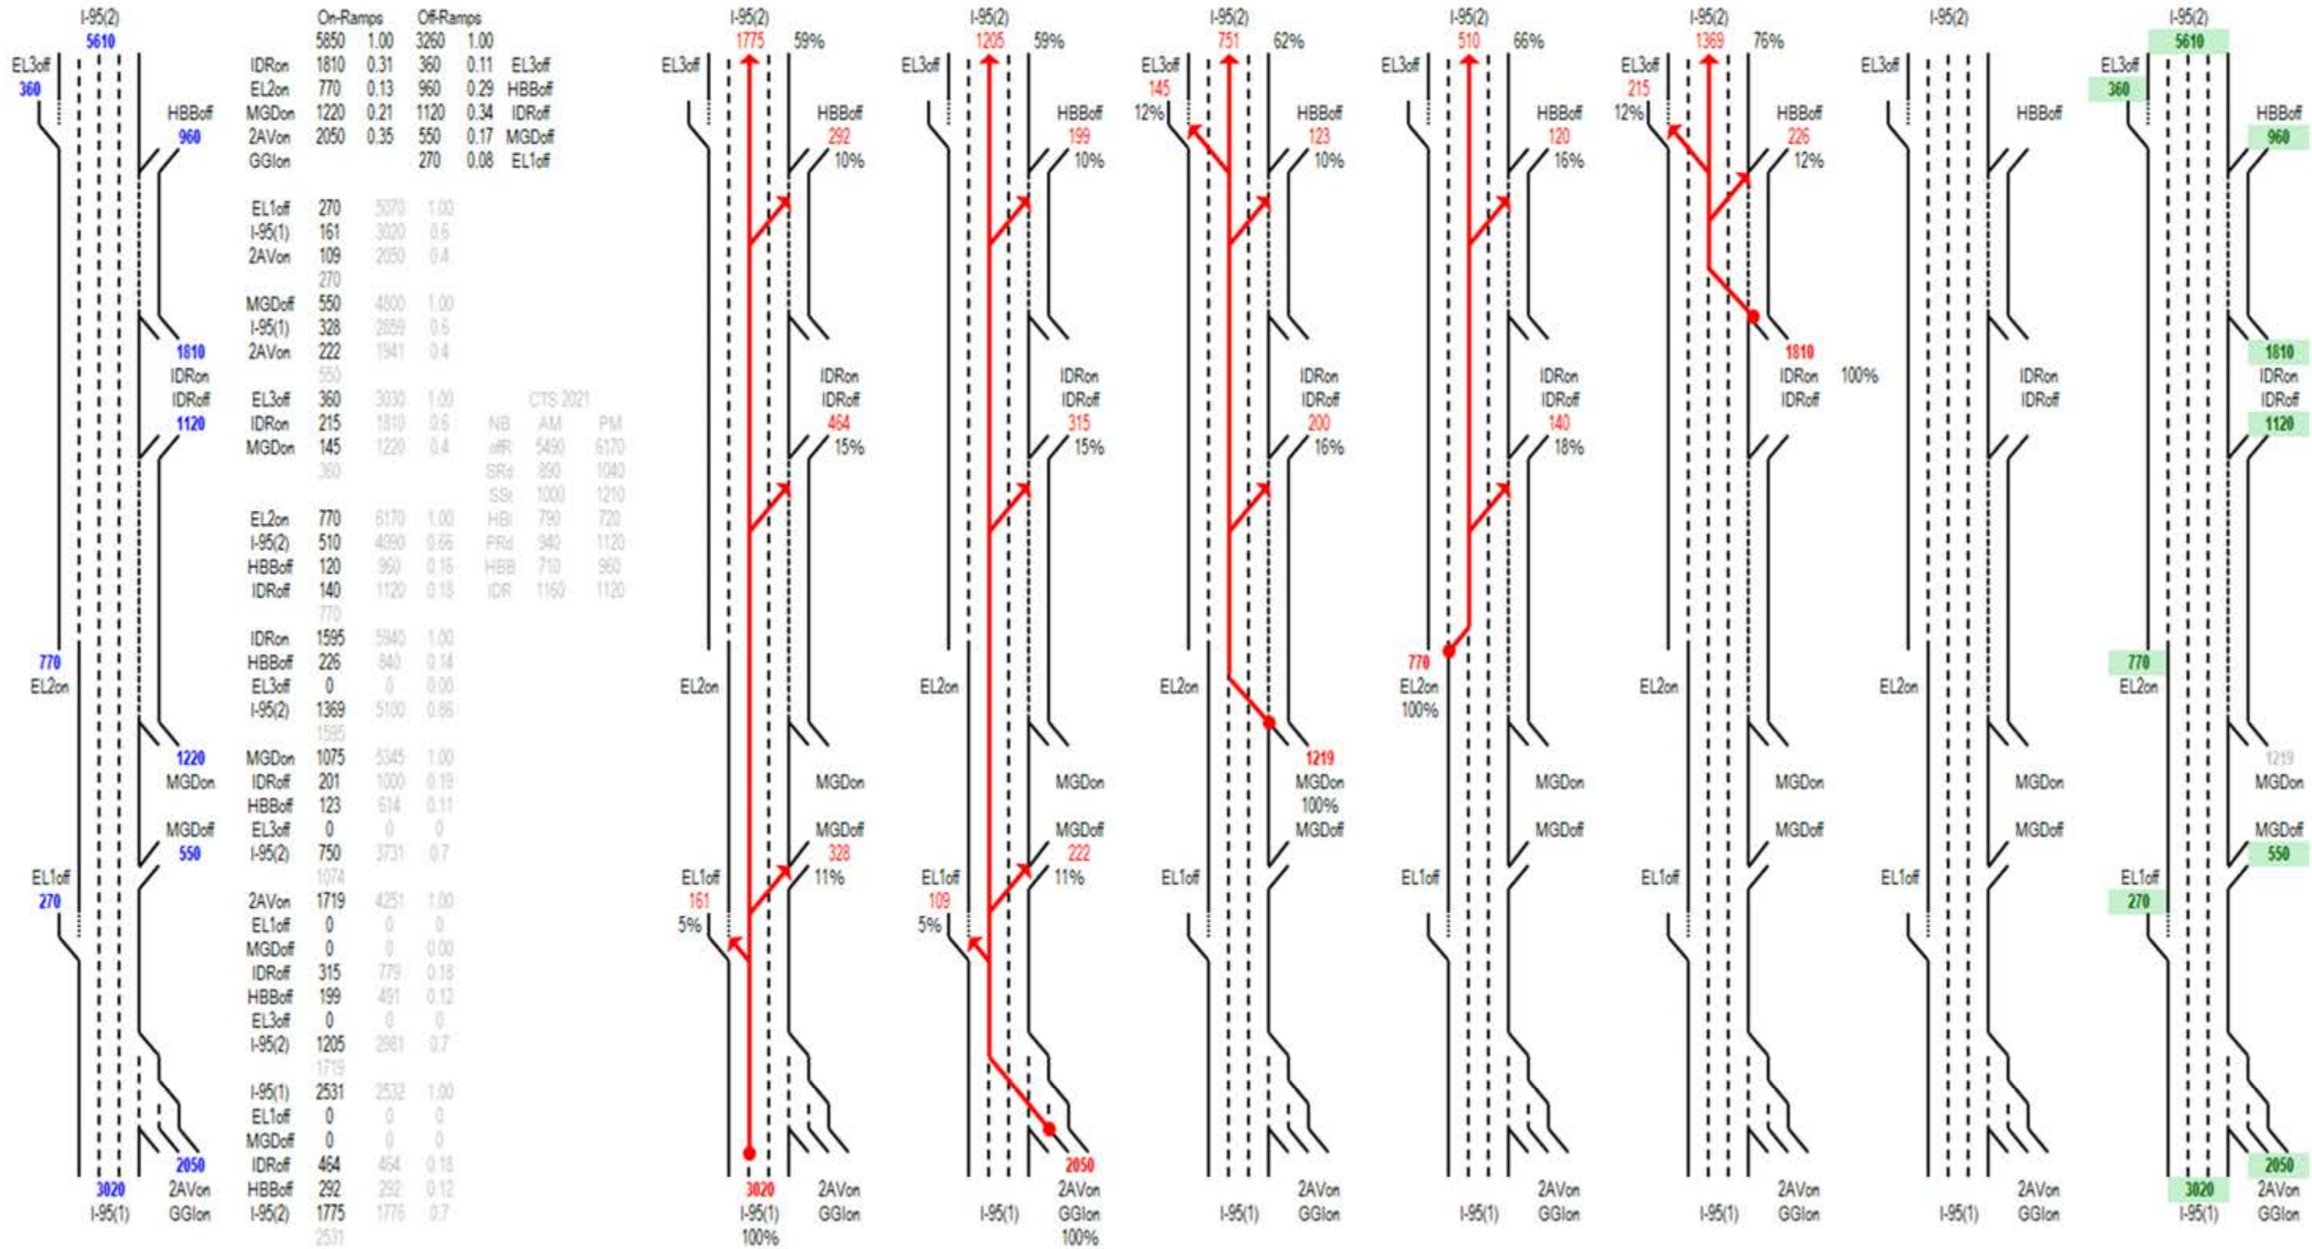

5.0 TRAFFIC FORECAST

The project traffic was developed based on 2019 FDOT Project Traffic Forecasting Handbook procedures; including the utilization of time-of-day volumes (i.e., applying diurnal factors as opposed to applying standard K and D factors), consistent with previous and on-going projects in the area. Horizon year 2045 No-Build scenario was modeled. Build Alternatives 1, 2, and 3 were developed by reassigning the 2050 No-Build volumes to each of the Build Alternatives based on the origin-destination and modified roadway network information. For Design Year 2050, traffic volumes were extrapolated to 2050 by applying the adjusted growth rate to balanced Existing Year 2021 or the minimum of 0.5% growth rate. For opening year 2030, traffic volumes were interpolated between Existing Year 2021 and Design Year 2050. Turning movement volumes were developed for the analyses of AM and PM peak hour periods using the FDOT TMTool. For freeway AM and PM peak hour volumes (mainline and ramps) were developed by applying the diurnal factor from the Existing Year 2021 balanced volumes. Volumes were checked for reasonableness and balanced. **Table 3** presents the AADT calculations. **Exhibits 11** through **18** present the Opening Year 2030 and Design Year 2050 No-Build and Build alternative summary volumes. Traffic forecast calculations are presented in **Attachment C**.

The Southeast Florida Regional Planning Model (SERPM), Version 8.513 has been used for this project. SERPM 8.513 model is validated to Year 2015 conditions and includes a future year 2045 scenario based on the adopted Cost Feasible plans from Miami-Dade MPO, Broward MPO, and Palm Beach Transportation Planning Agency (TPA). It is approved by the Regional Transportation Technical Advisory Committee-Modeling Subcommittee (RTTAC-MS) in South Florida for transportation engineering and planning studies.

A subarea validation was conducted, including SR 9/I-95 mainline, interchange ramps and arterial segments within the Area of Influence (AOI). Volume-Over-Count (V/C) Ratio targets were used to evaluate the model validation outputs. The subarea validation indicates that the SR 9/I-95 V/C Ratio of 4% is within the Freeway Volume-Over-Count Preferable Standard of +/- 5%; however, the SR 860/Miami Gardens Drive and CR 854/Ives Dairy Road V/C Ratio of 25% is over the Divided Arterial Volume-Over-Count Acceptable Standard of +/- 10%.

A 2021 SERPM model scenario was not developed by recreating a 2021 roadway network and interpolating 2021 socioeconomic data between the 2015 and 2045 socioeconomic data sets. Instead, 2021 model volumes were developed by interpolating between the 2015 and 2045 model volumes. As stated in NCHRP Report 765, the results will probably be similar in most cases. We anticipate that will be the case for this project due to the several constrains of the existing and potential roadway networks.

The 2045 No-Build network was developed in close coordination with FDOT District 4 and District 6 Project Managers and District 4's SR 9/I-95 PD&E from SR 858/Hallandale Beach Boulevard to Hollywood Boulevard Team. The 2045 No-Build network was built by incorporating

A future year (2045) no-build network in Southeast Florida Regional Planning Model (SERPM) was developed based on the 2045 Cost Feasible Plans adopted by the three MPOs in the region. The socioeconomic data, network coding, and other model settings were reviewed to make sure they are consistent with subsequent changes. The following three projects were included:

- 4056154 - SR 25/Okeechobee Road and SR 932/NW 103rd Street at NW 87th Avenue: Add turn lane.
- 4217072 - SR 93/I-75 Managed Lanes System from NW 170th Street to S of HEFT Interchange: Add special use lane.
- 4326871 - SR 826 from Flagler Street to NW 154th Street & I-75 from SR 826 to NW 170th Street: Add special use lane.

The no-build network also includes the proposed improvements from the aforementioned projects in coordination with the Department.

The growth rates of the SERPM forecasted volumes were compared against historical growth trends from FDOT count stations within the study area and Socioeconomic growth rates from population/employment data within the 2-mile buffer around study interchanges from model Base Year 2015 to model Forecast Year 2045. The Trend analysis indicates a maximum growth rate of 1.37% and a minimum growth rate of -1.32% within SR 9/I-95; and a maximum growth rate of 1.80% and a minimum growth rate of -0.30% within the two arterials. The Socioeconomic analysis indicates a maximum growth rate of 1.3% and a minimum growth rate of 0.06%. Any outlier links were postprocessed. Future year link volumes were adjusted using two factors per Equations 3-2 and 3-3 of the *2019 Project Traffic Forecasting Handbook*: the ratio of the actual base year traffic count to the base year model volume and the numerical difference between the actual base year traffic count and the base year model volume. The ratio and difference adjustments were checked against a minimum growth rate of 0.5% per year for reasonableness. After adjustments there were still 17 of 33 links that resulted in a model growth rate of less than 0.5% per year; therefore, the minimum growth rate of 0.5% per year was used for those 17 links.

Ratio Adjustment:

$$V_{r_adj} = \frac{Count}{V_b} \times V_f$$ Equation 3-2

Difference Adjustment:

$$V_{d_adj} = (Count - V_b) + V_f$$ Equation 3-3

Where

V_{r_adj} - adjusted future year model volume by ratio method
V_{d_adj} - adjusted future year model volume by difference method
$Count$ - base year traffic count
V_b - base year model volume
V_f - future year model volume

The final adjusted future year traffic forecast, V_{adj} is then the average of the two adjusted model volumes V_{r_adj} and V_{d_adj}, as shown in Equation 3-4 below:

$$V_{adj} = (V_{r_adj} + V_{d_adj})/2 \qquad \text{Equation 3-4}$$

An Origin-Destination/Traffic Assignment analysis was conducted, in the same way as existing conditions, to provide an understanding of the travel pattern along the corridor and provide information for traffic analysis when considering one-sided, two-sided and overlapping weaving, and to reassign traffic among the different alternatives. 2050 No-Build traffic volumes were extrapolated from the 2045 No-Build scenario model/adjusted volumes. Build Alternatives 1, 2, and 3 were developed by reassigning the 2050 No-Build volumes to each of the Build Alternatives based on the origin-destination and modified roadway network information. This approach provides a better comparison assessment of the operational capacity improvements from each alternative (i.e., capacity improvements are not diminished/diluted by diverted traffic from outside of the study area).

Analysis Period (min) 15	

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.
95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.
m Volume for 95th percentile queue is metered by upstream signal.

APPENDIX O1

FHWA Interchange Configuration Safety Comparison Tool

APPENDIX

O1

PDO Crash Frequency

User Input

Input Characteristic	Diamond/ Compressed	Roundabout Diamond	DDI	Parclo B, AB	Parclo A	SPDI	TDI
Urban area type *(1 = yes, 0 = no)*	1	0	1	0	0	1	0
Intersection skew angle >30 degrees *(1 = yes, 0 = no)*	0	0	0	0	0	0	0
Nearest interchange gore distance within 0.5 mi *(1 = yes, 0 = no)*	0	0	0	0	0	0	0
Managed lanes on freeway *(1 = yes, 0 = no)*	1	0	1	0	0	1	0
Freeway AADT *(value in vehicles/day)*	66,500	60,000	164,400	60,000	60,000	166,600	60,000
Freeway no. of through lanes (bidirectional total) *(no.)*	8	4	8	4	4	8	4
XR AADT *(value in vehicles/day)*	62,300	5,000	71,300	5,000	5,000	79,250	5,000
XR no. of through lanes (bidirectional total) *(no.)*	5	4	8	4	4	7	4
Total ramp AADT *(value in vehicles/day)*	112,000	20,000	108,200	20,000	20,000	108,200	20,000
COV of ramp volumes (see below) *(decimal #; calculation)*	0.36	0	0.41	0	0	0.41	0
Number of LT lanes on the XR at intersections *(no.)*	4	0	3	0	0	6	0

This is the base condition. Analysts must fill out the entire column even if this interchange type is not under consideration.

NOTE: Changes to the table above will be reflected on the KABC worksheet.

Coefficient of Variation (COV) of Ramp Calculation Tool

Ramp 1 AADT =	19500			
Ramp 2 AADT =	19500	Std. Deviation	9949.87	
Ramp 3 AADT =	38500	Mean	28000	NOTE: range of acceptable COV values is 0 to 1.15.
Ramp 4 AADT =	34500	COV	0.36	*Use this value for COV inputs in table*
Ramp 5 AADT =				
Ramp 6 AADT =				

NOTE: leave input cells blank for any ramps not included in analysis.

Model Output (Do Not Edit)

Predicted Crash Frequency	Diamond/ Compressed	Roundabout Diamond	DDI	Parclo B, AB	Parclo A	SPDI	TDI
95 percent CI LB *(crashes/year)*	0.00	0.00	0.00	0.00	0.00	0.00	0.00
Expected PDO crash frequency *(crashes/year)*	168.61	15.52	129.33	20.95	17.11	275.85	17.17
95 percent CI UB *(crashes/year)*	338.87	32.83	260.38	43.71	36.02	553.21	36.14
95 percent CI LB *(crashes/year)*	0.01	0.00	0.49	0.00	0.00	1.77	0.00
Expected KABC crash frequency (from KABC sheet) *(crashes/year)*	55.37	4.95	69.17	7.58	7.12	105.61	3.98
95 percent CI UB *(crashes/year)*	110.74	11.42	137.85	16.67	15.75	209.45	9.47
95 percent CI LB *(crashes/year)*	44.93	1.99	50.55	4.02	3.44	85.30	1.41
Expected total crash frequency (KABC + PDO) *(crashes/year)*	223.98	20.47	198.50	28.53	24.23	381.46	21.15
95 percent CI UB *(crashes/year)*	403.02	38.95	346.46	53.04	45.02	677.63	40.90

SDF Model

User Input

Input Characteristic	Diamond/ Compressed	Roundabout Diamond	DDI	Parclo (All Types)	SPDI	TDI
Freeway AADT ≥ 200,000 vpd *(1 = yes, 0 = no; Value in vpd)*	0	0	0	0	0	0
XR AADT ≥ 30,000 vpd *(1 = yes, 0 = no; Value in vpd)*	1	0	1	0	0	0
Freeway posted speed limit *(Value in mph)*	55	55	55	55	55	55
XR posted speed limit *(Value in mph)*	35	45	35	45	35	45
Nearest XR adjacent intersection (signal or roundabout) within 0.10 mi of ramp terminal *(1 = yes, 0 = no)*	0	0	0	0	0	0
Nearest interchange gore distance within 0.25 mi *(1 = yes, 0 = no)*	0	0	0	0	0	0
Number of pedestrian crossings conflicting with right-turning vehicles across interchange *(Ranges from 0 to 7)*	2	0	2	0	2	0
Freeway has eight or more lanes (bidirectional total) *(1 = yes, 0 = no)*	1	0	1	0	1	0
XR has four or more lanes (bidirectional total) *(1 = yes, 0 = no)*	1	1	1	1	1	1
Type A or B parclo interchange (includes A2/A4/B2/B4) *(1 = yes, 0 = no)*				1		
Type AB parclo interchange (includes AB2/AB4) *(1 = yes, 0 = no)*				0		

This is the base condition. Analysts must fill out the entire column even if this interchange type isn't under consideration.

SDF Model Output (Do Not Edit)

Crash Severity Probability	Diamond/ Compressed	Roundabout Diamond	DDI	Parclo	SPDI	TDI
Probability of KA severity outcome	0.0561	0.0258	0.0301	0.0366	0.0357	0.0276
Probability of B severity outcome	0.2110	0.0813	0.1420	0.1155	0.1412	0.1094
Probability of C severity outcome	0.7329	0.8929	0.8280	0.8479	0.8232	0.8630

CRASH MODIFICATION FACTORS CLEARINGHOUSE

CMF / CRF Details

CMF ID: 463

CMF Name: Convert at-grade intersection into grade-separated interchange

Description:

Prior Condition: No Prior Condition(s)

Category: Interchange design

Study ID: *Revision of the Hand Book of Road Safety Measures*, Elvik, R. and Erke, A. 2007

Star Quality Rating	
Star Quality Rating:	1 Star

Crash Modification Factor (CMF)	
Value:	0.73
Adjusted Standard Error:	0.08
Unadjusted Standard Error:	0.05

Crash Reduction Factor	
Value:	27
Adjusted Standard Error:	8
Unadjusted Standard Error:	5

Applicability	
Crash Type:	All
Crash Severity:	All
Roadway Types:	Not Specified
Minimum Number of Lanes:	
Maximum Number of Lanes:	
Number of Lanes Direction:

Crash Prediction Evaluation Report

Version v17.0.0 (Sep 22, 2021)

April 11, 2025

Disclaimer

The Interactive Highway Design Model (IHSDM) software is disseminated under the sponsorship of the Department of Transportation in the interest of information exchange. The United States Government assumes no liability for its content or use thereof. This document does not constitute a standard, specification, or regulation.

The United States Government does not endorse products or manufacturers. Trade and manufacturers' names may appear in this software and documentation only because they are considered essential to the objective of the software.

Limited Warranty and Limitations of Remedies

This software product is provided "as-is," without warranty of any kind-either expressed or implied (but not limited to the implied warranties of merchantability and fitness for a particular purpose). The FHWA do not warrant that the functions contained in the software will meet the end-user's requirements or that the operation of the software will be uninterrupted and error-free.

Under no circumstances will the FHWA be liable to the end-user for any damages or claimed lost profits, lost savings, or other incidental or consequential damages rising out of the use or inability to use the software (even if these organizations have been advised of the possibility of such damages), or for any claim by any other party.

Notice

The use of the IHSDM software is being done strictly on a voluntary basis. In exchange for provision of IHSDM, the user agrees that the Federal Highway Administration (FHWA), U.S. Department of Transportation and any other agency of the Federal Government shall not be responsible for any errors, damage or other liability that may result from any and all use of the software, including installation and testing of the software. The user further agrees to hold the FHWA and the Federal Government harmless from any resulting liability. The user agrees that this hold harmless provision shall flow to any person to whom or any entity to which the user provides the IHSDM software. It is the user's full responsibility to inform any person to whom or any entity to which it provides the IHSDM software of this hold harmless provision.

Last Year of Observed Crashes:

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70, 17-58, AND 17-68

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.
- Intersection crash prediction methods for some intersection configurations and traffic control types not currently addressed in the HSM (e.g., all-way stop; rural 3-leg signalized; 3-leg stop-controlled where the major leg turns; urban 5-leg signalized; urban high-speed intersections): completed in 2021 under NCHRP Project 17-68.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58, 17-68, and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Section Types

Section 1 Evaluation

Section: Section 1
Evaluation Start Location: 687+45.600
Evaluation End Location: 908+16.000
Functional Class: Freeway
Type of Alignment: Divided, Multilane
Model Category: Freeway Segment
Calibration Factor: FI_EN=1.0; FI_EX=1.0; FI_MV=1.0; FI_SV=1.0; PDO_EN=1.0; PDO_EX=1.0; PDO_MV=1.0; PDO_SV=1.0;

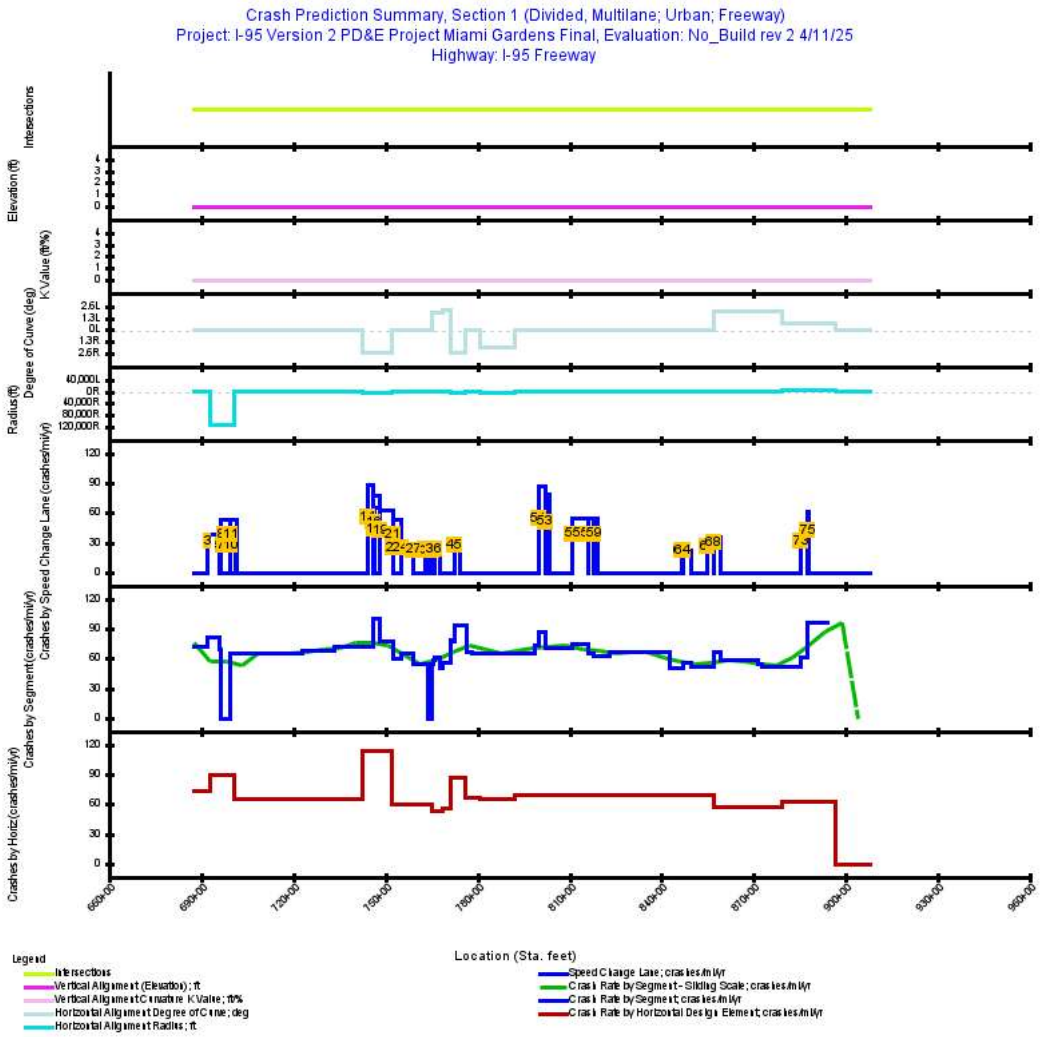

Figure Crash Prediction Summary (Section 1)

Table 3. Predicted Freeway Crash Rates and Frequencies Summary (Section 1)

First Year of Analysis	**2030**
Last Year of Analysis	**2050**
Effective Length (mi)	**3.2816**
Average Future Road AADT (vpd)	**187,816**
Predicted Crashes	
Total Crashes	**4,557.56**
Fatal and Injury Crashes	**1,334.69**
Property-Damage-Only Crashes	**3,222.86**
Percent of Total Predicted Crashes	
Percent Fatal and Injury Crashes (%)	**29**
Percent Property-Damage-Only Crashes (%)	**71**
Predicted Crash Rate	
Crash Rate (crashes/mi/yr)	**66.1334**
FI Crash Rate (crashes/mi/yr)	**19.3673**
PDO Crash Rate (crashes/mi/yr)	**46.7660**
Predicted Travel Crash Rate	
Total Travel (million veh-mi)	**4,724.29**

Travel Crash Rate (crashes/million veh-mi)	**0.97**
Travel FI Crash Rate (crashes/million veh-mi)	**0.28**
Travel PDO Crash Rate (crashes/million veh-mi)	**0.68**

Note: *Effective Length* is the *segment length* minus the length of the *speed change lanes* if present.

Table 4. Predicted Freeway Speed Change Lane Crash Rates and Frequencies Summary (Speed Change)

First Year of Analysis	**2030**
Last Year of Analysis	**2050**
Length (mi)	**1.2566**
Average Future Road AADT (vpd)	**90,934**
Predicted Crashes	
Total Crashes	**1,165.81**
Fatal and Injury Crashes	**352.28**
Property-Damage-Only Crashes	**813.53**
Percent of Total Predicted Crashes	
Percent Fatal and Injury Crashes (%)	**30**
Percent Property-Damage-Only Crashes (%)	**70**
Predicted Crash Rate	
Crash Rate (crashes/mi/yr)	**44.1774**
FI Crash Rate (crashes/mi/yr)	**13.3494**
PDO Crash Rate (crashes/mi/yr)	**30.8281**
Predicted Travel Crash Rate	
Total Travel (million veh-mi)	**875.88**
Travel Crash Rate (crashes/million veh-mi)	**1.33**
Travel FI Crash Rate (crashes/million veh-mi)	**0.40**
Travel PDO Crash Rate (crashes/million veh-mi)	**0.93**

Note: *Total Travel and Crash Rates/Million Vehicle Miles* for *Speed Change Lanes* reflect AADTs that are **half of the Freeway Segment AADTs** based on the assumption of 50/50 directional distribution.

Table 8. Predicted Crash Frequencies by Year (Section 1)

Year	Total Crashes	FI Crashes	Percent FI (%)	PDO Crashes	Percent PDO (%)
2030	252.07	75.32	29.880	176.75	70.121
2031	254.08	75.81	29.840	178.26	70.160
2032	256.09	76.31	29.800	179.77	70.200
2033	258.11	76.81	29.760	181.29	70.240
2034	260.13	77.31	29.721	182.82	70.279
2035	262.16	77.81	29.681	184.35	70.319
2036	264.20	78.31	29.642	185.89	70.358
2037	266.25	78.82	29.602	187.43	70.397
2038	268.30	79.32	29.563	188.98	70.437
2039	270.36	79.82	29.524	190.54	70.476
2040	272.42	80.32	29.485	192.10	70.515
2041	274.49	80.83	29.446	193.67	70.554
2042	276.57	81.33	29.407	195.24	70.593
2043	278.65	81.84	29.368	196.82	70.632
2044	280.75	82.34	29.329	198.41	70.671

Year	Total Crashes	FI Crashes	Percent FI (%)	PDO Crashes	Percent PDO (%)
2045	282.84	82.84	29.290	200.00	70.710
2046	284.94	83.35	29.251	201.59	70.749
2047	287.06	83.86	29.213	203.20	70.787
2048	289.17	84.36	29.174	204.81	70.826
2049	291.29	84.87	29.135	206.43	70.865
2050	293.42	85.37	29.096	208.05	70.904
Total	5,723.36	1,686.97	29.475	4,036.39	70.525
Average	272.54	80.33	29.475	192.21	70.525

Note: *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

	Total Crashes	209.45	34.2	402.39	65.8	611.84	100.0

Note: *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

Table 14. Evaluation Message

Start Location (Sta. ft)	End Location (Sta. ft)	Message
687+45.600	692+20.800	Information: for segment #1 (687+45.600 to 692+20.800), Outside shoulder width (2.50 feet) is less than specified boundaries (4.00 feet); adjusted in CMF calculations.
687+45.600	692+20.800	Information: for segment #1 (687+45.600 to 692+20.800), Median barrier offset on the left side of roadway from edge of inside traveled way to barrier face (12.00 feet) is greater than inside shoulder width plus median width (9.00 feet). This indicates there is problem with the input data.

Start Location (Sta. ft)	End Location (Sta. ft)	Message
692+20.800	695+90.600	Information: for segment #2 (692+20.800 to 695+90.600), Outside shoulder width (2.50 feet) is less than specified boundaries (4.00 feet); adjusted in CMF calculations.
692+20.800	695+90.600	Information: for segment #2 (692+20.800 to 695+90.600), Median barrier offset on the left side of roadway from edge of inside traveled way to barrier face (12.00 feet) is greater than inside shoulder width plus median width (9.00 feet). This indicates there is problem with the input data.
695+90.600	696+43.200	Information: for segment #4 (695+90.600 to 696+43.200), Outside shoulder width (2.50 feet) is less than specified boundaries (4.00 feet); adjusted in CMF calculations.
695+90.600	696+43.200	Information: for segment #4 (695+90.600 to 696+43.200), Median barrier offset on the left side of roadway from edge of inside traveled way to barrier face (12.00 feet) is greater than inside shoulder width plus median width (9.00 feet). This indicates there is problem with the input data.
696+43.200	699+60.600	Information: for segment #6 (696+43.200 to 699+60.600), Outside shoulder width (2.50 feet) is less than specified boundaries (4.00 feet); adjusted in CMF calculations.
696+43.200	699+60.600	Information: for segment #6 (696+43.200 to 699+60.600), Median barrier offset on the left side of roadway from edge of inside traveled way to barrier face (12.00 feet) is greater than inside shoulder width plus median width (9.00 feet). This indicates there is problem with the input data.
699+60.600	722+83.600	Information: for segment #9 (699+60.600 to 722+83.600), Outside shoulder width (2.50 feet) is less than specified boundaries (4.00 feet); adjusted in CMF calculations.
699+60.600	722+83.600	Information: for segment #9 (699+60.600 to 722+83.600), Median barrier offset on the left side of roadway from edge of inside traveled way to barrier face (12.00 feet) is greater than inside shoulder width plus median width (9.00 feet). This indicates there is problem with the input data.
722+83.600	733+39.200	Information: for segment #12 (722+83.600 to 733+39.200), Outside shoulder width (2.50 feet) is less than specified boundaries (4.00 feet); adjusted in CMF calculations.
722+83.600	733+39.200	Information: for segment #12 (722+83.600 to 733+39.200), Median barrier offset on the left side of roadway from edge of inside traveled way to barrier face (12.00 feet) is greater than inside shoulder width plus median width (9.00

Start Location (Sta. ft)	End Location (Sta. ft)	Message
		feet). This indicates there is problem with the input data.
733+39.200	746+06.400	Information: for segment #13 (733+39.200 to 746+06.400), Outside shoulder width (2.50 feet) is less than specified boundaries (4.00 feet); adjusted in CMF calculations.
733+39.200	746+06.400	Information: for segment #13 (733+39.200 to 746+06.400), Median barrier offset on the left side of roadway from edge of inside traveled way to barrier face (12.00 feet) is greater than inside shoulder width plus median width (9.00 feet). This indicates there is problem with the input data.
746+06.400	748+17.600	Information: for segment #15 (746+06.400 to 748+17.600), Outside shoulder width (2.50 feet) is less than specified boundaries (4.00 feet); adjusted in CMF calculations.
746+06.400	748+17.600	Information: for segment #15 (746+06.400 to 748+17.600), Median barrier offset on the left side of roadway from edge of inside traveled way to barrier face (12.00 feet) is greater than inside shoulder width plus median width (9.00 feet). This indicates there is problem with the input data.
748+17.600	752+40.000	Information: for segment #18 (748+17.600 to 752+40.000), Outside shoulder width (2.50 feet) is less than specified boundaries (4.00 feet); adjusted in CMF calculations.
748+17.600	752+40.000	Information: for segment #18 (748+17.600 to 752+40.000), Median barrier offset on the left side of roadway from edge of inside traveled way to barrier face (12.00 feet) is greater than inside shoulder width plus median width (9.00 feet). This indicates there is problem with the input data.
752+40.000	755+04.600	Information: for segment #20 (752+40.000 to 755+04.600), Outside shoulder width (2.50 feet) is less than specified boundaries (4.00 feet); adjusted in CMF calculations.
752+40.000	755+04.600	Information: for segment #20 (752+40.000 to 755+04.600), Median barrier offset on the left side of roadway from edge of inside traveled way to barrier face (12.00 feet) is greater than inside shoulder width plus median width (9.00 feet). This indicates there is problem with the input data.
755+04.600	759+26.400	Information: for segment #23 (755+04.600 to 759+26.400), Outside shoulder width (2.50 feet) is less than specified boundaries (4.00 feet); adjusted in CMF calculations.
755+04.600	759+26.400	Information: for segment #23 (755+04.600 to 759+26.400), Median barrier offset on the left side of roadway from edge of inside traveled

Start Location (Sta. ft)	End Location (Sta. ft)	Message
		way to barrier face (12.00 feet) is greater than inside shoulder width plus median width (9.00 feet). This indicates there is problem with the input data.
759+26.400	764+01.600	Information: for segment #25 (759+26.400 to 764+01.600), Outside shoulder width (2.50 feet) is less than specified boundaries (4.00 feet); adjusted in CMF calculations.
759+26.400	764+01.600	Information: for segment #25 (759+26.400 to 764+01.600), Median barrier offset on the left side of roadway from edge of inside traveled way to barrier face (12.00 feet) is greater than inside shoulder width plus median width (9.00 feet). This indicates there is problem with the input data.
764+01.600	765+07.600	Information: for segment #28 (764+01.600 to 765+07.600), Median barrier offset on the left side of roadway from edge of inside traveled way to barrier face (12.00 feet) is greater than inside shoulder width plus median width (9.00 feet). This indicates there is problem with the input data.
765+07.600	765+60.000	Information: for segment #31 (765+07.600 to 765+60.000), Median barrier offset on the left side of roadway from edge of inside traveled way to barrier face (12.00 feet) is greater than inside shoulder width plus median width (9.00 feet). This indicates there is problem with the input data.
765+60.000	765+99.600	Information: for segment #33 (765+60.000 to 765+99.600), Median barrier offset on the left side of roadway from edge of inside traveled way to barrier face (12.00 feet) is greater than inside shoulder width plus median width (9.00 feet). This indicates there is problem with the input data.
765+99.600	767+71.200	Information: for segment #35 (765+99.600 to 767+71.200), Median barrier offset on the left side of roadway from edge of inside traveled way to barrier face (12.00 feet) is greater than inside shoulder width plus median width (9.00 feet). This indicates there is problem with the input data.
767+71.200	767+84.600	Information: for segment #37 (767+71.200 to 767+84.600), Median barrier offset on the left side of roadway from edge of inside traveled way to barrier face (12.00 feet) is greater than inside shoulder width plus median width (9.00 feet). This indicates there is problem with the input data.
767+84.600	768+76.800	Information: for segment #38 (767+84.600 to 768+76.800), Median barrier offset on the left side of roadway from edge of inside traveled way to barrier face (12.00 feet) is greater than

		inside shoulder width plus median width (9.00 feet). This indicates there is problem with the input data.
768+76.800	769+69.600	Information: for segment #39 (768+76.800 to 769+69.600), Median barrier offset on the left side of roadway from edge of inside traveled way to barrier face (12.00 feet) is greater than inside shoulder width plus median width (9.00 feet). This indicates there is problem with the input data.
769+69.600	771+40.800	Information: for segment #40 (769+69.600 to 771+40.800), Median barrier offset on the left side of roadway from edge of inside traveled way to barrier face (12.00 feet) is greater than inside shoulder width plus median width (9.00 feet). This indicates there is problem with the input data.
771+40.800	771+54.600	Information: for segment #41 (771+40.800 to 771+54.600), Median barrier offset on the left side of roadway from edge of inside traveled way to barrier face (12.00 feet) is greater than inside shoulder width plus median width (9.00 feet). This indicates there is problem with the input data.
771+54.600	772+46.600	Information: for segment #42 (771+54.600 to 772+46.600), Median barrier offset on the left side of roadway from edge of inside traveled way to barrier face (12.00 feet) is greater than inside shoulder width plus median width (10.50 feet). This indicates there is problem with the input data.
798+86.400	799+92.600	Information: for segment #48 (798+86.400 to 799+92.600), Outside shoulder width (16.50 feet) is greater than specified boundaries (14.00 feet); adjusted in CMF calculations.
799+92.600	802+03.200	Information: for segment #50 (799+92.600 to 802+03.200), Inside shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
799+92.600	802+03.200	Information: for segment #50 (799+92.600 to 802+03.200), Outside shoulder width (22.00 feet) is greater than specified boundaries (14.00 feet); adjusted in CMF calculations.
799+92.600	802+03.200	Information: for segment #50 (799+92.600 to 802+03.200), Median barrier offset on the right side of roadway from edge of inside traveled way to barrier face (12.00 feet) is greater than inside shoulder width plus median width (10.00 feet). This indicates there is problem with the input data.
799+92.600	802+03.200	Information: for segment #50 (799+92.600 to 802+03.200), Median barrier offset on the left side of roadway from edge of inside traveled way to barrier face (12.00 feet) is greater than

Disclaimer

The Interactive Highway Design Model (IHSDM) software is disseminated under the sponsorship of the Department of Transportation in the interest of information exchange. The United States Government assumes no liability for its content or use thereof. This document does not constitute a standard, specification, or regulation.

The United States Government does not endorse products or manufacturers. Trade and manufacturers' names may appear in this software and documentation only because they are considered essential to the objective of the software.

Limited Warranty and Limitations of Remedies

This software product is provided "as-is," without warranty of any kind-either expressed or implied (but not limited to the implied warranties of merchantability and fitness for a particular purpose). The FHWA do not warrant that the functions contained in the software will meet the end-user's requirements or that the operation of the software will be uninterrupted and error-free.

Under no circumstances will the FHWA be liable to the end-user for any damages or claimed lost profits, lost savings, or other incidental or consequential damages rising out of the use or inability to use the software (even if these organizations have been advised of the possibility of such damages), or for any claim by any other party.

Notice

The use of the IHSDM software is being done strictly on a voluntary basis. In exchange for provision of IHSDM, the user agrees that the Federal Highway Administration (FHWA), U.S. Department of Transportation and any other agency of the Federal Government shall not be responsible for any errors, damage or other liability that may result from any and all use of the software, including installation and testing of the software. The user further agrees to hold the FHWA and the Federal Government harmless from any resulting liability. The user agrees that this hold harmless provision shall flow to any person to whom or any entity to which the user provides the IHSDM software. It is the user's full responsibility to inform any person to whom or any entity to which it provides the IHSDM software of this hold harmless provision.

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70, 17-58, AND 17-68

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.
- Intersection crash prediction methods for some intersection configurations and traffic control types not currently addressed in the HSM (e.g., all-way stop; rural 3-leg signalized; 3-leg stop-controlled where the major leg turns; urban 5-leg signalized; urban high-speed intersections): completed in 2021 under NCHRP Project 17-68.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58, 17-68, and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Table 3. Predicted Freeway Crash Rates and Frequencies Summary (Section 1)

First Year of Analysis	**2030**
Last Year of Analysis	**2050**
Effective Length (mi)	**2.6939**
Average Future Road AADT (vpd)	**189,949**
Predicted Crashes	
Total Crashes	**3,667.06**
Fatal and Injury Crashes	**1,116.77**
Property-Damage-Only Crashes	**2,550.28**
Percent of Total Predicted Crashes	
Percent Fatal and Injury Crashes (%)	**30**
Percent Property-Damage-Only Crashes (%)	**70**
Predicted Crash Rate	
Crash Rate (crashes/mi/yr)	**64.8207**
FI Crash Rate (crashes/mi/yr)	**19.7406**
PDO Crash Rate (crashes/mi/yr)	**45.0801**
Predicted Travel Crash Rate	
Total Travel (million veh-mi)	**3,922.24**
Travel Crash Rate (crashes/million veh-mi)	**0.94**
Travel FI Crash Rate (crashes/million veh-mi)	**0.28**
Travel PDO Crash Rate (crashes/million veh-mi)	**0.65**

Note: *Effective Length* is the *segment length* minus the length of the *speed change lanes* if present.

Table 4. Predicted Freeway Speed Change Lane Crash Rates and Frequencies Summary (Speed Change)

First Year of Analysis	**2030**
Last Year of Analysis	**2050**
Length (mi)	**0.5722**
Average Future Road AADT (vpd)	**92,256**
Predicted Crashes	
Total Crashes	**546.91**
Fatal and Injury Crashes	**154.16**

Property-Damage-Only Crashes	**392.76**
Percent of Total Predicted Crashes	
Percent Fatal and Injury Crashes (%)	**28**
Percent Property-Damage-Only Crashes (%)	**72**
Predicted Crash Rate	
Crash Rate (crashes/mi/yr)	**45.5181**
FI Crash Rate (crashes/mi/yr)	**12.8300**
PDO Crash Rate (crashes/mi/yr)	**32.6881**
Predicted Travel Crash Rate	
Total Travel (million veh-mi)	**404.60**
Travel Crash Rate (crashes/million veh-mi)	**1.35**
Travel FI Crash Rate (crashes/million veh-mi)	**0.38**
Travel PDO Crash Rate (crashes/million veh-mi)	**0.97**

Note: *Total Travel and Crash Rates/Million Vehicle Miles* for *Speed Change Lanes* reflect AADTs that are **half of the Freeway Segment AADTs** based on the assumption of 50/50 directional distribution.

Table 5. Predicted Crash Frequencies and Rates by Freeway Segment/Intersection (Section 1)

Segment Number/Intersection Name/Cross Road	Start Location (MP)	End Location (MP)	Effective Length (mi)	Total Predicted Crashes for Evaluation Period	Predicted Total Crash Frequency (crashes/yr)	Predicted FI Crash Frequency (crashes/yr)	Predicted PDO Crash Frequency (crashes/yr)	Predicted Cras Rate (crashes/mi/y
1	0.0	0.41	0.2833	358.332	17.0634	5.2673	11.7961	60.231

Highway Segment	Sideswipe, Same Direction Collision	5.55	4.5	12.10	9.9	17.65	14.4
Highway Segment	Total Multiple Vehicle Crashes	25.95	21.1	64.29	52.3	90.24	73.5
Highway Segment	Total Highway Segment Crashes	35.12	28.6	87.71	71.4	122.83	100.0
	Total Crashes	35.12	28.6	87.71	71.4	122.83	100.0

Note: *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

Table 13. Predicted Entrance Speed Change Lane Crash Type Distribution (Speed Change)

Element Type	Crash Type	Fatal and Injury		Property Damage Only		Total	
		Crashes	Crashes (%)	Crashes	Crashes (%)	Crashes	Crashes (%)
Highway Segment	Collision with Animal	0.00	0.0	0.61	0.1	0.61	0.1
Highway Segment	Collision with Fixed Object	23.09	5.4	39.35	9.3	62.45	14.7
Highway Segment	Collision with Other Object	2.26	0.5	10.98	2.6	13.24	3.1
Highway Segment	Other Single-vehicle Collision	7.98	1.9	4.88	1.2	12.86	3.0
Highway Segment	Collision with Parked Vehicle	0.48	0.1	0.92	0.2	1.39	0.3
Highway Segment	Total Single Vehicle Crashes	33.81	8.0	56.74	13.4	90.55	21.4
Highway Segment	Right-Angle Collision	2.26	0.5	4.88	1.2	7.14	1.7
Highway Segment	Head-on Collision	0.48	0.1	0.30	0.1	0.78	0.2
Highway Segment	Other Multi-vehicle Collision	2.02	0.5	4.58	1.1	6.60	1.6
Highway Segment	Rear-end Collision	64.64	15.2	161.68	38.1	226.31	53.4

Element Type	Crash Type	Fatal and Injury		Property Damage Only		Total	
		Crashes	Crashes (%)	Crashes	Crashes (%)	Crashes	Crashes (%)
Highway Segment	Sideswipe, Same Direction Collision	15.83	3.7	76.87	18.1	92.70	21.9
Highway Segment	Total Multiple Vehicle Crashes	85.23	20.1	248.31	58.6	333.54	78.6
Highway Segment	Total Highway Segment Crashes	119.04	28.1	305.05	71.9	424.09	100.0
	Total Crashes	119.04	28.1	305.05	71.9	424.09	100.0

Note: *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

Table 14. Evaluation Message

Start Location (MP)	End Location (MP)	Message
2.98	3.2	Warning: for segment #27 (2.98 to 3.2), unknown/unsupported segment type, no crash prediction supported
3.2	3.28	Warning: for segment #28 (3.2 to 3.28), unknown/unsupported segment type, no crash prediction supported
3.28	3.31	Warning: for segment #29 (3.28 to 3.31), unknown/unsupported segment type, no crash prediction supported
3.31	3.33	Warning: for segment #30 (3.31 to 3.33), unknown/unsupported segment type, no crash prediction supported
3.33	3.94	Warning: for segment #31 (3.33 to 3.94), unknown/unsupported segment type, no crash prediction supported
0.0	0.41	Information: for segment #1 (0.0 to 0.41), Freeway Segment of type Nine-lane Freeway is using unbalanced lane processing with types Eight-lane Freeway and Ten-lane Freeway
0.41	0.44	Information: for segment #3 (0.41 to 0.44), Freeway Segment of type Nine-lane Freeway is using unbalanced lane processing with types Eight-lane Freeway and Ten-lane Freeway
0.44	0.61	Information: for segment #4 (0.44 to 0.61), Freeway Segment of type Nine-lane Freeway is using unbalanced lane processing with types Eight-lane Freeway and Ten-lane Freeway
0.61	0.73	Information: for segment #6 (0.61 to 0.73), Freeway Segment of type Nine-lane Freeway is using unbalanced lane processing with types Eight-lane Freeway and Ten-lane Freeway
1.18	1.59	Information: for segment #17 (1.18 to 1.59), Freeway Segment of type Nine-lane Freeway is using unbalanced lane processing with types Eight-lane Freeway and Ten-lane Freeway
1.59	1.66	Information: for segment #18 (1.59 to 1.66), Freeway Segment of type Nine-lane Freeway is using unbalanced lane processing with types Eight-lane Freeway and Ten-lane Freeway

Start Location (MP)	End Location (MP)	Message
1.66	2.22	Information: for segment #20 (1.66 to 2.22), Freeway Segment of type Nine-lane Freeway is using unbalanced lane processing with types Eight-lane Freeway and Ten-lane Freeway
0.16	0.41	Information: for segment #2 (0.16 to 0.41), Speed Change Segment of type Nine-lane Freeway Speed Change is using unbalanced lane processing with types Eight-lane Freeway Speed Change and Ten-lane Freeway Speed Change
0.52	0.61	Information: for segment #5 (0.52 to 0.61), Speed Change Segment of type Nine-lane Freeway Speed Change is using unbalanced lane processing with types Eight-lane Freeway Speed Change and Ten-lane Freeway Speed Change
0.7	0.73	Information: for segment #7 (0.7 to 0.73), Speed Change Segment of type Nine-lane Freeway Speed Change is using unbalanced lane processing with types Eight-lane Freeway Speed Change and Ten-lane Freeway Speed Change
1.59	1.66	Information: for segment #19 (1.59 to 1.66), Speed Change Segment of type Nine-lane Freeway Speed Change is using unbalanced lane processing with types Eight-lane Freeway Speed Change and Ten-lane Freeway Speed Change
1.66	1.67	Information: for segment #21 (1.66 to 1.67), Speed Change Segment of type Nine-lane Freeway Speed Change is using unbalanced lane processing with types Eight-lane Freeway Speed Change and Ten-lane Freeway Speed Change

Disclaimer

The Interactive Highway Design Model (IHSDM) software is disseminated under the sponsorship of the Department of Transportation in the interest of information exchange. The United States Government assumes no liability for its content or use thereof. This document does not constitute a standard, specification, or regulation.

The United States Government does not endorse products or manufacturers. Trade and manufacturers' names may appear in this software and documentation only because they are considered essential to the objective of the software.

Limited Warranty and Limitations of Remedies

This software product is provided "as-is," without warranty of any kind-either expressed or implied (but not limited to the implied warranties of merchantability and fitness for a particular purpose). The FHWA do not warrant that the functions contained in the software will meet the end-user's requirements or that the operation of the software will be uninterrupted and error-free.

Under no circumstances will the FHWA be liable to the end-user for any damages or claimed lost profits, lost savings, or other incidental or consequential damages rising out of the use or inability to use the software (even if these organizations have been advised of the possibility of such damages), or for any claim by any other party.

Notice

The use of the IHSDM software is being done strictly on a voluntary basis. In exchange for provision of IHSDM, the user agrees that the Federal Highway Administration (FHWA), U.S. Department of Transportation and any other agency of the Federal Government shall not be responsible for any errors, damage or other liability that may result from any and all use of the software, including installation and testing of the software. The user further agrees to hold the FHWA and the Federal Government harmless from any resulting liability. The user agrees that this hold harmless provision shall flow to any person to whom or any entity to which the user provides the IHSDM software. It is the user's full responsibility to inform any person to whom or any entity to which it provides the IHSDM software of this hold harmless provision.

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70, 17-58, AND 17-68

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.
- Intersection crash prediction methods for some intersection configurations and traffic control types not currently addressed in the HSM (e.g., all-way stop; rural 3-leg signalized; 3-leg stop-controlled where the major leg turns; urban 5-leg signalized; urban high-speed intersections): completed in 2021 under NCHRP Project 17-68.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58, 17-68, and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Table 3. Predicted Freeway Crash Rates and Frequencies Summary (Section 1)

First Year of Analysis	**2030**
Last Year of Analysis	**2050**
Effective Length (mi)	**2.7712**
Average Future Road AADT (vpd)	**177,969**
Predicted Crashes	
Total Crashes	**3,574.78**
Fatal and Injury Crashes	**1,118.57**
Property-Damage-Only Crashes	**2,456.21**
Percent of Total Predicted Crashes	
Percent Fatal and Injury Crashes (%)	**31**
Percent Property-Damage-Only Crashes (%)	**69**
Predicted Crash Rate	
Crash Rate (crashes/mi/yr)	**61.4272**
FI Crash Rate (crashes/mi/yr)	**19.2209**
PDO Crash Rate (crashes/mi/yr)	**42.2063**
Predicted Travel Crash Rate	
Total Travel (million veh-mi)	**3,780.30**
Travel Crash Rate (crashes/million veh-mi)	**0.95**
Travel FI Crash Rate (crashes/million veh-mi)	**0.30**

Travel PDO Crash Rate (crashes/million veh-mi)	**0.65**

Note: *Effective Length* is the *segment length* minus the length of the *speed change lanes* if present.

Table 4. Predicted Freeway Speed Change Lane Crash Rates and Frequencies Summary (Speed Change)

First Year of Analysis	**2030**
Last Year of Analysis	**2050**
Length (mi)	**0.8976**
Average Future Road AADT (vpd)	**87,183**
Predicted Crashes	
Total Crashes	**467.19**
Fatal and Injury Crashes	**154.45**
Property-Damage-Only Crashes	**312.74**
Percent of Total Predicted Crashes	
Percent Fatal and Injury Crashes (%)	**33**
Percent Property-Damage-Only Crashes (%)	**67**
Predicted Crash Rate	
Crash Rate (crashes/mi/yr)	**24.7858**
FI Crash Rate (crashes/mi/yr)	**8.1941**
PDO Crash Rate (crashes/mi/yr)	**16.5917**
Predicted Travel Crash Rate	
Total Travel (million veh-mi)	**599.81**
Travel Crash Rate (crashes/million veh-mi)	**0.78**
Travel FI Crash Rate (crashes/million veh-mi)	**0.26**
Travel PDO Crash Rate (crashes/million veh-mi)	**0.52**

Note: *Total Travel and Crash Rates/Million Vehicle Miles* for *Speed Change Lanes* reflect AADTs that are **half of the Freeway Segment AADTs** based on the assumption of 50/50 directional distribution.

Table 5. Predicted Crash Frequencies and Rates by Freeway Segment/Intersection (Section 1)

Segment Number/Intersection Name/Cross Road	Start Location (MP)	End Location (MP)	Effective Length (mi)	Total Predicted Crashes for Evaluation Period	Predicted Total Crash Frequency (crashes/yr)	Predicted FI Crash Frequency (crashes/yr)	Predicted PDO Crash Frequency (crashes/yr)	Predicted Cras Rate (crashes/mi/y

Disclaimer

The Interactive Highway Design Model (IHSDM) software is disseminated under the sponsorship of the Department of Transportation in the interest of information exchange. The United States Government assumes no liability for its content or use thereof. This document does not constitute a standard, specification, or regulation.

The United States Government does not endorse products or manufacturers. Trade and manufacturers' names may appear in this software and documentation only because they are considered essential to the objective of the software.

Limited Warranty and Limitations of Remedies

This software product is provided "as-is," without warranty of any kind-either expressed or implied (but not limited to the implied warranties of merchantability and fitness for a particular purpose). The FHWA do not warrant that the functions contained in the software will meet the end-user's requirements or that the operation of the software will be uninterrupted and error-free.

Under no circumstances will the FHWA be liable to the end-user for any damages or claimed lost profits, lost savings, or other incidental or consequential damages rising out of the use or inability to use the software (even if these organizations have been advised of the possibility of such damages), or for any claim by any other party.

Notice

The use of the IHSDM software is being done strictly on a voluntary basis. In exchange for provision of IHSDM, the user agrees that the Federal Highway Administration (FHWA), U.S. Department of Transportation and any other agency of the Federal Government shall not be responsible for any errors, damage or other liability that may result from any and all use of the software, including installation and testing of the software. The user further agrees to hold the FHWA and the Federal Government harmless from any resulting liability. The user agrees that this hold harmless provision shall flow to any person to whom or any entity to which the user provides the IHSDM software. It is the user's full responsibility to inform any person to whom or any entity to which it provides the IHSDM software of this hold harmless provision.

Last Year of Observed Crashes:

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70, 17-58, AND 17-68

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.
- Intersection crash prediction methods for some intersection configurations and traffic control types not currently addressed in the HSM (e.g., all-way stop; rural 3-leg signalized; 3-leg stop-controlled where the major leg turns; urban 5-leg signalized; urban high-speed intersections): completed in 2021 under NCHRP Project 17-68.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58, 17-68, and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Table 3. Predicted Freeway Crash Rates and Frequencies Summary (Section 1)

First Year of Analysis	**2030**
Last Year of Analysis	**2050**
Effective Length (mi)	**2.1705**

Average Future Road AADT (vpd)	**186,930**
Predicted Crashes	
Total Crashes	**2,819.83**
Fatal and Injury Crashes	**861.87**
Property-Damage-Only Crashes	**1,957.96**
Percent of Total Predicted Crashes	
Percent Fatal and Injury Crashes (%)	**31**
Percent Property-Damage-Only Crashes (%)	**69**
Predicted Crash Rate	
Crash Rate (crashes/mi/yr)	**61.8650**
FI Crash Rate (crashes/mi/yr)	**18.9088**
PDO Crash Rate (crashes/mi/yr)	**42.9562**
Predicted Travel Crash Rate	
Total Travel (million veh-mi)	**3,109.92**
Travel Crash Rate (crashes/million veh-mi)	**0.91**
Travel FI Crash Rate (crashes/million veh-mi)	**0.28**
Travel PDO Crash Rate (crashes/million veh-mi)	**0.63**

Note: *Effective Length* is the *segment length* minus the length of the *speed change lanes* if present.

Table 4. Predicted Freeway Speed Change Lane Crash Rates and Frequencies Summary (Speed Change)

First Year of Analysis	**2030**
Last Year of Analysis	**2050**
Length (mi)	**0.3190**
Average Future Road AADT (vpd)	**91,178**
Predicted Crashes	
Total Crashes	**173.21**
Fatal and Injury Crashes	**57.25**
Property-Damage-Only Crashes	**115.96**
Percent of Total Predicted Crashes	
Percent Fatal and Injury Crashes (%)	**33**
Percent Property-Damage-Only Crashes (%)	**67**
Predicted Crash Rate	
Crash Rate (crashes/mi/yr)	**25.8551**
FI Crash Rate (crashes/mi/yr)	**8.5452**
PDO Crash Rate (crashes/mi/yr)	**17.3099**
Predicted Travel Crash Rate	

Total Travel (million veh-mi)	**222.95**
Travel Crash Rate (crashes/million veh-mi)	**0.78**
Travel FI Crash Rate (crashes/million veh-mi)	**0.26**
Travel PDO Crash Rate (crashes/million veh-mi)	**0.52**

Note: *Total Travel and Crash Rates/Million Vehicle Miles* for *Speed Change Lanes* reflect AADTs that are **half of the Freeway Segment AADTs** based on the assumption of 50/50 directional distribution.

Table 5. Predicted Crash Frequencies and Rates by Freeway Segment/Intersection (Section 1)

Segment Number/Intersection Name/Cross Road	Start Location (MP)	End Location (MP)	Effective Length (mi)	Total Predicted Crashes for Evaluation Period	Predicted Total Crash Frequency (crashes/yr)	Predicted FI Crash Frequency (crashes/yr)	Predicted PDO Crash Frequency (crashes/yr)	Predicted Crash Rate (crashes/mi/yr

Table 8. Predicted Crash Frequencies by Year (Section 1)

Year	Total Crashes	FI Crashes	Percent FI (%)	PDO Crashes	Percent PDO (%)
2030	145.13	44.42	30.608	100.71	69.392
2031	144.87	44.35	30.618	100.51	69.382
2032	144.60	44.29	30.628	100.31	69.372
2033	144.34	44.22	30.638	100.12	69.362
2034	144.08	44.16	30.648	99.92	69.352
2035	143.82	44.09	30.659	99.72	69.341
2036	143.56	44.03	30.669	99.53	69.331

Year	Total Crashes	FI Crashes	Percent FI (%)	PDO Crashes	Percent PDO (%)
2037	143.30	43.96	30.679	99.33	69.321
2038	143.04	43.90	30.689	99.14	69.311
2039	142.78	43.83	30.699	98.94	69.301
2040	142.52	43.77	30.709	98.75	69.291
2041	142.26	43.70	30.720	98.56	69.281
2042	142.00	43.64	30.730	98.36	69.270
2043	141.74	43.57	30.740	98.17	69.260
2044	141.49	43.51	30.750	97.98	69.250
2045	141.23	43.44	30.760	97.79	69.240
2046	140.97	43.38	30.770	97.59	69.230
2047	140.72	43.31	30.780	97.40	69.220
2048	140.46	43.25	30.790	97.21	69.210
2049	140.21	43.18	30.800	97.02	69.200
2050	139.95	43.12	30.810	96.83	69.190
Total	2,993.04	919.12	30.709	2,073.92	69.291
Average	142.53	43.77	30.709	98.76	69.291

Note: *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

Table 9. Predicted Crash Severity by Freeway Segment (Section 1)

Seg. No.	Fatal (K) Crashes (crashes)	Incapacitating Injury (A) Crashes (crashes)	Non-Incapacitating Injury (B) Crashes (crashes)	Possible Injury (C) Crashes (crashes)	No Injury (O) Crashes (crashes)

Bridge Final Cost Per SF $205.52					

FDOT Long Range Estimating System - Production

R4: Project Details Composite Report

By Component

Project: 414964-1-22-01 **Apr-23**

Description: SR 9 / I-95 from South of SR 860 / Miami Gardens Drive to North of Broward County Line

District: 06 **County:** 87 MIAMI-DADE

Project Manager: Benitez, Auraliz

Version 3 Project Grand Total **$545,004,166.28**

Description: SR 9 / I-95 from South of SR 860 / Miami Gardens Drive to North of Broward County Line Alternative 2

Bridge No. 17-1 Type=HLB **Length=558.35 FT** **Width=58.54 FT**

Bridge Basic Cost based on Factored Cost $200.00 SF $6,537,161.80

Bridge Final Cost Per SF $206.77

Bridge Type: Overpass Bridge

Pay Items

Pay Item	Description	Total Quantity	Unit	Weighted Avg. Unit Price	Total Amount
415-1-9	REINF STEEL- APPROACH SLABS	265,931.75	LB	$1.36	$361,667.18
110-3	REMOVAL OF EXISTING STRUCTURES/BRIDGES	221,290.00	SF	$60.00	$13,277,400.00

Bridge No. 1-1 Type=OPB **Length=675 FT** **Width=200 FT**

Bridge Basic Cost based on Factored Cost $190.80 SF $25,758,000.00

Bridge Final Cost Per SF $196.40

Bridge No. 1-2 Type=OPB **Length=180 FT** **Width=240 FT**

Bridge Basic Cost based on Factored Cost $190.80 SF $8,242,560.00

Bridge Final Cost Per SF $211.81

Bridge No. 4-1 Type=OPB **Length=577.89 FT** **Width=243.83 FT**

Bridge Basic Cost based on Factored Cost $240.00 SF $33,817,660.49

Bridge Final Cost Per SF $264.43

Bridge Type: High Level

Pay Items

Pay Item	Description	Total Quantity	Unit	Weighted Avg. Unit Price	Total Amount
400-2-10	CONC CLASS II, APPROACH SLABS	935.01	CY	$1,463.48	$1,368,368.45

Bridge No. 7-1 Type=HLB **Length=4004 FT** **Width=29.67 FT**

Bridge Basic Cost based on Factored Cost $200.00 SF $23,759,736.00

Bridge Final Cost Per SF $200.94

Bridge No. 7-1 Type=HLB **Length=321.61 FT** **Width=40.22 FT**

Bridge Final Cost Per SF $274.37					
Bridge No. 4-2 Type=OPB		**Length=182 FT**		**Width=41 FT**	
Bridge Basic Cost based on Factored Cost $159.60 SF					$1,190,935.20
Bridge Final Cost Per SF $180.37					
Bridge No. 8-2 Type=OPB		**Length=825 FT**		**Width=41 FT**	
Bridge Basic Cost based on Factored Cost $159.60 SF					$5,398,470.00
Bridge Final Cost Per SF $164.18					
Bridge No. 21-1 Type=OPB		**Length=910 FT**		**Width=30 FT**	
Bridge Basic Cost based on Factored Cost $200.40 SF					$5,470,920.00
Bridge Final Cost Per SF $204.56					
Bridge No. 12-1 Type=OPB		**Length=1015 FT**		**Width=37 FT**	
Bridge Basic Cost based on Factored Cost $200.40 SF					$7,526,022.00
Bridge Final Cost Per SF $204.13					
Bridge No. 17-1 Type=OPB		**Length=1015 FT**		**Width=27 FT**	
Bridge Basic Cost based on Factored Cost $150.00 SF					$4,110,750.00
Bridge Final Cost Per SF $153.73					
Bridge Type: High Level

R4: Project Details Composite Report

By Component

Project: 414964-1-22-01					**Apr-23**
Description: SR 9 / I-95 from South of SR 860 / Miami Gardens Drive to North of Broward County Line					
District: 06	**County:** 87 MIAMI-DADE				
Project Manager: Benitez, Auraliz					
Version 6 Project Grand Total					**$527,789,887.91**
Description: SR 9 / I-95 from South of SR 860 / Miami Gardens Drive to North of Broward County Line Alternative 3					
400-2-10	CONC CLASS II, APPROACH SLABS	673.36	CY	$1,463.48	$985,448.89
Bridge No. 7-1 Type=HLB		**Length=425 FT**		**Width=43 FT**	
Bridge Basic Cost based on Factored Cost $240.00 SF					$4,386,000.00
Bridge Final Cost Per SF $248.90					
Bridge No. 8-1 Type=HLB		**Length=940 FT**		**Width=43 FT**	
Bridge Basic Cost based on Factored Cost $200.00 SF					$8,084,000.00
Bridge Final Cost Per SF $204.02					
Bridge No. 11-1 Type=HLB		**Length=870 FT**		**Width=43 FT**	
Bridge Basic Cost based on Factored Cost $200.00 SF					$7,482,000.00
Bridge Final Cost Per SF $204.35					
Bridge No. 10-1 Type=HLB		**Length=561 FT**		**Width=27 FT**	
Bridge Basic Cost based on Factored Cost $200.00 SF					$3,029,400.00
Bridge Final Cost Per SF $206.74					
Bridge No. 10-2 Type=HLB		**Length=810 FT**		**Width=27 FT**	
Bridge Basic Cost based on Factored Cost $200.00 SF					$4,374,000.00
Bridge Final Cost Per SF $204.67					
Bridge No. 6-1 Type=HLB		**Length=1540 FT**		**Width=30 FT**	
Bridge Basic Cost based on Factored Cost $200.00 SF					$9,240,000.00
Bridge Final Cost Per SF $202.46					
Bridge No. 9-1 Type=HLB		**Length=561 FT**		**Width=30 FT**	
Bridge Basic Cost based on Factored Cost $200.00 SF					$3,366,000.00
Bridge Final Cost Per SF $206.74					
Bridge No. 9-2 Type=HLB		**Length=810 FT**		**Width=30 FT**	
Bridge Basic Cost based on Factored Cost $160.00 SF					$3,888,000.00
Bridge Final Cost Per SF $164.67					
Bridge No. 5-1 Type=HLB		**Length=1540 FT**		**Width=30 FT**	
Bridge Basic Cost based on Factored Cost $200.00 SF					$9,240,000.00
Bridge Final Cost Per SF $202.46					
Bridge Type: Overpass Bridge
